PREFACE

At the end of the 2007/08 Agricultural Year, the National Bureau of Statistics (NBS) in collaboration with the Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; the Prime Minister's Office, Regional Administration and Local Government (PMO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources; Livestock and Fisheries conducted the Agricultural Sample Census. This is the fourth Agricultural Census to be carried out in Tanzania, the first one was conducted in 1971/72, the second in 1993/94 and 1994/95 (during 1993/94 data on household characteristics and livestock count were collected and data on crop area and production in 1994/95), and the third was conducted in 2002/03.

The census collected detailed data on crop production, crop marketing, crop storage, livestock production, fish farming, and poverty indicators. In addition to this, the census was large in its scope and coverage as it provides data that can be disaggregated at district level and thus, allow comparisons with the 2002/03 National Sample Census of Agriculture. The census covered smallholders in rural areas only and large scale farms. This report presents data disaggregated at regional and district level and it focuses on smallholders' crop production and livestock keeping.

The extensive nature of the census in relation to its scope and coverage is a result of the increasing demand for more detailed information to assist in the proper planning of the agricultural sector and in the administrative decentralization of planning to district level. It is hoped that this report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural households in the country.

On behalf of the Government of Tanzania, I wish to express my appreciation for the financial support provided by the development partners, in particular, the Department for International Development (DFID) and the Japanese Government through the Japan International Cooperation Agency (JICA) and others who contributed through the pooled fund mechanism.

My appreciation also goes to all those who in one-way or the other have contributed to the success of the census. In particular, I would also like to mention the enormous effort made by the Planning Group composed of professionals from the Agriculture Statistics Department of the National Bureau of Statistics, Ministry of Agriculture, Food Security and Cooperatives, Ministry of Livestock Development and Fisheries, Ministry of Water and Irrigation, Ministry of Agriculture,

Livestock and Natural Resource, Zanzibar, the Prime Minister's Office, Regional Administration and Local Government, Ministry of Industries, Trade and Marketing and the Office of the Chief Government Statistician, Zanzibar, the Food and Agriculture Organization of the United Nations and the Censuses and Surveys Technical Working Group (CSTWG).

Finally, I would like to extend my sincere gratitude to all the professionals, the consultants, Regional and District Supervisors and field enumerators for their commendable work. Certainly without their dedication, the census could not be successful.

Dr. Albina A. Chuwa

Director General

National Bureau of Statistics

EXECUTIVE SUMMARY

This report presents survey data results for Singida region as a subset of the National Sample Census of Agriculture 2007/08. The report covers small-scale agriculture households in rural areas of Singida region; selected using statistical sampling techniques and the results excludes large-scale farmers. The highlights are described under relevant subheadings on issues related to agricultural production, production practices, productivity, access to resources and levels of involvement in agricultural related activities, including a section on poverty indicators.

i) Household Characteristics

The total number of agricultural households in Singida region were 216,992 of which, 46.3% engaged in crop production only, 53.3% engaged in mixed crop and livestock production. Livestock only and pastoralist households were found only in Manyoni comprising of 0.23% and 0.09%, respectively. However, the majority of household members in the region (53%) depended on crop production as a major source of livelihood.

The female population was more prevalent in the younger age bracket of 26-39 while the male population was more prevalent in the older age brackets of 50-54, and 75-84 years. This implies that females are more likely to

The literacy level was at average of 78%, the lowest being 74% in Manyoni district and the highest 82 % in Singida Urban district. In all the districts, the largest proportions of the households (69-72%) were able to read or write Kiswahili. Manyoni had the largest proportion of households (11.5%) who were able to read and write in both Kiswahili and English and Iramba had the smallest proportion of households (6%) able to read and write in the two languages.

ii) Crop Production

Land Area

The total usable land available was 639,999 ha. The district with the largest usable land was Singida Rural (212,811 ha, 33.3% of the total available usable land in the region) while Singida Urban had the smallest usable land area available (30,096 ha, 4.7%).

Land Use Types

Crops, either temporary in monoculture occupied the largest part of the usable land area (336,891 ha, 52.4% of the usable land area in the region) followed by temporary mixed crops (127,821 ha,

19.9%) and area kept under (natural) pasture (57,827 ha, 9%). The land area left under fallow occupied 49,788 ha (7.7%)

Planted Area

The total planted area in the region was 544,565 ha. The region receives only one season of rainfall, the long rains. The largest average of land area planted per household was 3.7 hectares in Manyoni, (2.4 ha) in Iramba, 1.9 ha in Singida rural and 1.4 ha in Singida urban.

iii) Crop Types

The main crops in the region comprised of cereals (68% of the planted area), oil seeds and oil nuts (26%) and pulses planted on 4% of the planted area.

Cereal production

The total area planted with cereals in the region was 316,613 ha and maize occupied 150,240 ha (47.5%). Other cereals planted were sorghum (30.8%), bulrush millet (15.4%), paddy (4.1%) and finger millet (2.2%). The total production of cereals was 360,696 tons and maize contributed 52.8% of the total cereals harvested while sorghum had a contribution of 31%

▪ Maize

Maize was planted in all the districts by a total of 144,016 households and the total area planted was 150,240 ha. The major maize production district was Iramba with (58,267 ha) equivalent to 38.8% of the total planted area with cereal crops in the region, and also had the largest number of households equivalent to 38.6% of maize growing households in the region.

The planted area per household was the largest in Manyoni district (1.3 ha/household) and smallest in Singida Urban (0.6 ha/household). Maize yield was the highest in both Iramba and Manyoni districts each at (1.4 t/ha).

▪ Sorghum

Sorghum was planted on a total of 97,513 ha. The largest planted area was in Iramba district 42,121ha, (43.2% of the total planted area) followed by Singida Rural (38,859 ha, 39.9%). However, the higher number of households which planted the crop was in Singida Rural district (50,766hh, 46.9%) and Iramba district (36,859hh, 34.1%). Yield was the highest in Iramba (1.42 t/ha) and lowest in Singida urban district (0.68 t/ha).

- **Bulrush millet**

The producing districts of bulrush millet were Singida Rural (48.6% of the planted area), Iramba district (27.7%) and Singida Urban (19.1%). Bulrush millet was a minor crop in Manyoni district. Planted area per household was the largest in Iramba district (1.1 ha/household) and smallest in Singida Rural (0.7 ha).

- **Paddy**

Paddy was planted by about 11,425 households. Singida Rural district had the largest planted area in the region (64.3%), Manyoni (25.2%) and Iramba (9.8%). Paddy production in Singida Urban was almost negligible.

- **Finger millet**

Finger millet was grown predominantly in Singida Rural district (5,308ha,77.7%) involving 6,913 households(76.2%)of the households in the Region).

The average planted area per household was largest in Manyoni (1.1 ha) followed by Singida Rural (0.8 ha/hh), Singida Urban (0.6 ha/hh) and Iramba (0.4ha/hh).

Oil Seeds and Oil Nuts Production

Oil seed and oil nut crops were planted on a total of 120,237 ha (22.1% of the total planted area in the region). The major oil seed crop was under sunflower and others included groundnuts and simsim.

- **Sunflower**

Sunflower was planted in all the four districts on a total area of 99,363 ha (18.2% of the total planted area in the region) by a total of 89,875 households. Iramba district was the major production area with 53.1% of the total area planted with sunflower. Planted area per household was largest in Iramba (1.3 ha/hh) and smallest in Singida Rural (0.90 ha/hh). Sunflower productivity was highest in Iramba (0.72 t/ha) and lowest in Manyoni (0.52 t/ha). The total harvested quantity was 68,297 tons and Iramba district contributed the largest share (55.7%). Sunflower was a minor crop in Singida Urban district.

- **Groundnuts**

Groundnuts were planted in Iramba, Manyoni and Singida rural districts on 2.8% of the total planted area in the region. engaging 30,892 households, The largest planted area was in Manyoni

district (58.6% of total planted area) compared to 23.1% in Iramba district and 17.7% in Singida Rural. The average planted area was in the range of 0.46 – 0.6 ha/household.

Pulse crops

The pulses grown in the region includes beans and chick peas and to a limited extent, green grams, Bambara nuts and cowpeas. A total of 16,560 ha were planted with pulses in the region.

▪ Beans

Beans were planted in all the districts except Singida Urban. The total area planted with beans was 6,420 ha (1.2% of the total planted area). Production areas were Manyoni district (45.3% of planted area), Iramba (33.6%) and Singida Rural district (21.1%). The average area planted per household was below one hectare. Highest yield was 2 t/ha in Iramba district and lowest in Manyoni district (0.97 t/ha). The total harvested quantity was (8,965 ton) with Iramba district producing the largest quantity (4,254 tons, 47.5% of the total production) followed by, Manyoni (31.3%) and Singida Rural (21.2%).

▪ Chick peas

Chick peas were planted in Iramba, Manyoni and Singida Rural districts on 35.9% of the total planted area planted with pulses in the region (5,949 ha). Manyoni district had the largest planted area (51.3%) and Iramba district had the largest proportion of land planted with chick peas (1.32%). Most of the harvested quantity was also obtained from Iramba (48.2%) and Manyoni districts (48.2% of the total harvest).

Roots and Tuber Crops Production

▪ Sweet Potatoes

The total area planted with sweet potatoes in the region was 3,591 ha. Planted area distribution between districts was 37.5% in Iramba, 35.9% in Manyoni, 20.9% in Singida Rural and 5.8% in Singida Urban. Iramba had 40.3% of the growing households. The planted area per household was within the range of 0.3-0.4 ha. Sweet potatoes were most productive in Singida Urban (3.3 t/ha) and least productive in Manyoni district (2.3 t/ha). However, Iramba district had the largest production (41.3%) of the total of 9,695 tons of sweet potatoes harvested in the region.

- **Cassava**

Cassava was planted on 3,216 ha most of it in Manyoni district (84.4% of the total area planted with cassava). Cassava yields were highly variable between districts ranging from 0.02 t/ha in Manyoni to 4.22 t/ha in Singida Rural district.

Fruits and Vegetables

Fruits and vegetable crops were planted on less than one percent of the planted area in the region. The two most dominant vegetable crops were onion (44.3% of area planted with vegetables) and okra (37.6%) followed by tomato.

- **Onion**

The single largest onion producing district in the region was Singida Rural (78.3% of the total planted area). However, onion yields was lowest in Singida Rural district (1.5 t/ha) compared to other districts where yields of 2.6 to 2.8 tons/ha were recorded.

- **Okra**

Okra was produced in Singida Rural and Singida Urban districts. Singida rural district was the major producer with 98.7% of the planted area and contributing 94% of the total harvest. Yields varied from 0.5 t/ha in Singida Rural to 2.3 t/ha in Singida Urban.

Planted area per household was relatively large in Singida rural district (3.04 ha/household) and small in Singida Urban district (0.15 ha/household).

- **Tomatoes**

Tomatoes were mostly grown in Singida Urban (51.8% of the planted area) and Iramba district (48.2% of the planted area). Yields were at an average of 23 t/ha for both Singida Urban and Iramba. However, Singida urban accounted for slightly more (51.5%) to the total 2,596 tons harvested tomatoes as compared to Iramba district (48.5% of the total harvest).

Production of Other Annual Crops

Other annual crops planted were cotton and tobacco both of which are cash crops. A total of 4,114 households were involved of which 53.1% planted cotton and 46.9% planted tobacco.

▪ **Tobacco**

Tobacco was planted in Manyoni and Iramba districts only on 2,231 hectares by 1929 households. Manyoni was the major producing which accounted for 96.7% of the total planted area and by 1,749 household's equivalent to 90.7% of the total tobacco growing households in the region.

▪ **Cotton**

Cotton was planted in Manyoni and Iramba districts only Iramba was the major cotton production district accounting for 75.4% (1,601 ha) of the planted area. The cotton planted area per household in Iramba district (1.27 ha/hh) was more than twice that of Manyoni. Iramba district also accounted for 85.8% of the total harvested seed cotton.

Perennial or Permanent Crops

Permanent crops occupied about 10,830 ha (2% of the planted area) implying that in this region, permanent crops made a relatively small contribution to crop production in the region. The major permanent crop was mango (62.6% of the area under permanent crops) and others were banana (11.8%) and sugarcane (3.8%).

▪ **Mango**

Mango was planted on 0.43 % of the total planted area in the region of which 50.2% was in Iramba district and Manyoni district was the second most important district for mango production in the region. The planted area per household was highly variable from 0.2 ha/household in Singida rural district to 1.3 ha in Iramba district

▪ **Banana**

Banana was planted mostly in Manyoni district (62.8% of the total area planted with banana in the region) and also in Singida rural (21.1%) and Iramba district (21.1%).

iv) Use of Inputs**Use of Un-mechanized Agricultural Equipment**

The type of agricultural equipment used for different farm operations were mostly operated by hand and or relied on simple mechanized technologies. The hand hoe was used by the largest proportion of the households in all districts in the range of 31-41%, followed by the sword (23-38%) and the ox-plough (5-12.5%) Iramba and Singida Rural districts were leading in the use of animal-drawn equipment.

Use of Animal-drawn and Mechanized Agricultural Equipment

The animals used most frequently to provide power were the cow mostly used in Singida Rural followed by Iramba district, and the donkeys mostly used in Iramba followed by Singida Rural. Power tillers were amongst the agricultural equipment's available to rural households. However, these equipment's were used by relatively few agricultural households but the choices differed between districts.

Use of Improved Seed

Overall, the use of improved seeds was limited to less than (15%) of the total planted area in the region. The largest area planted with improved seeds was in Iramba district (49.8% of the total planted area in the region) and the smallest was in Singida Urban (4.1%).

Use of Fertilizer

Both organic and inorganic fertilizers were applied in the region on 11.2% of the total planted area in the region implying that the major portion of the planted area did not receive any type of fertilizer. Organic fertilizers were used in all the districts whereas inorganic fertilizers were used in all the districts except Singida Rural

Use of Pesticides

Pesticides were applied on a total of 9,702 ha, equivalent to (2.1%) of the planted area. Insecticides were the most dominant pesticide used (70.8%) followed by fungicides (20.4%) while herbicides were the least in use (8.9%).

v) Irrigation

The planted area applied with irrigation in the region was 1.5% of the total planted area in the region. In each of the districts, the area planted with irrigation represented very small proportion of the total planted area in the district and Singida Rural district had the largest planted area applied with irrigation (61.4% of the total irrigated area in the region).

Sources of Water for Irrigation

The main sources of irrigation water were tap water (44%), rivers (27%) and canals (22%). Dams were used only in Manyoni and wells were used only in Singida Rural district. Bore holes and lakes were not used as sources of irrigation water in the region.

Method of Obtaining Irrigation Water

The majority of households that applied irrigation obtained water by gravity (61.7%) followed by hand bucket (33.8%) and a few households used the hand pump (4.5%).

vi) Access to Crop Extension Services

Extension services were provided most extensively in Iramba district (95.1% of the households reached), Singida Urban (70.4%), Manyoni (60.5%) and in Singida Rural district (43.2%)

vii) Crop Storage, Processing and Marketing**Methods of Storage**

The largest proportion of the households (41%) stored crops in locally made structures, followed by sacks or open drums (38%) of the households.

Crop Sales

Sale of crops was conducted in all the districts with household participation varying from 43% in Singida Urban to 79% in Manyoni district.

Marketing Problems

The single most challenging problem cited by the largest proportion of households (70%) was the low price in the open market and others included market being too far (5.5%), lack of transport (4%), transport cost too high (3%), lack of market information and government regulation (each with 2%). Other minor problems were also cited.

viii) Agricultural Credit

Access to credit was reported in all the districts except Singida Urban. Family, friends and relatives were the only sources of credit in Iramba district and the major source in Manyoni district. In Singida Rural, households accessed credit only through cooperatives. Banks provided credit to a limited proportion of the households in Manyoni district.

ix) Soil Erosion Control and Water Harvesting Structures

Singida Rural district accounted for 57.4% of all water harvesting structures in the region followed by Iramba district with 31.4%, Manyoni (6.8%) and Singida Urban (4.3%).

x) Livestock Production

The livestock types in the region comprised of cattle, goats/sheep, pigs and chicken.

▪ Cattle

The cattle population in the region was 1,588,837 with Manyoni district having the largest cattle population (767,273 or 48.3% of the total cattle population in the region) followed by Singida Rural (400,510, 25.2%), Iramba (356,005, 22.4%) and Singida Urban (65,005, 4.1%). Over 90% of the cattle were indigenous.

▪ Goats

The total goat population was 839,169 with Singida Rural district having the largest population of 312,804 goats or 37.3 % of the total goat population in the region followed by Iramba with 249,923 (29.8%), Manyoni with 212,783 (25.4%), and Singida Urban with 63,659 (7.6%). Most of the goats (99.5%) were indigenous.

▪ Sheep

The region had a population of 477,772 sheep most of which were reared in Iramba (165,596, 34.7%) followed by Manyoni (162,982, 34.1%), Singida Rural (127,455, 26.7%) and Singida Urban (21,739, 4.6%).

▪ Pigs

Total pig population was 48,935 reared in all the districts except Singida Urban. Iramba district had the largest number with 42,073 pigs or 86 % of the total pig population in the region, followed by Singida Rural with 3,672 (7.5%) and Manyoni district with 3,190 (6.5%).

▪ Chicken

The total chicken population in the region was 1,615,779 with Singida Rural district keeping the largest number (717,202 chicken or 44.4 % of the total chicken population in the region), followed by Iramba with 539,761 (33.4%), Manyoni with 257,850 (16%) and Singida Urban district with 100,966 (6.2%). Most of the chicken population (93%) was of the indigenous type.

Incidences of Ticks and Tsetse Flies and Deworming

All the districts reported incidences of tick-borne diseases and tsetse fly infestation. About 43 % of the livestock households reported to have been affected by the tick incidence and 14 % by the tsetse incidence.

De-worming of livestock against the parasites was reported by all the districts in the region and relatively, cattle were de-wormed by the largest proportion (81%) of the households compared to other types of livestock.

Fish Farming

Fish farming was not practiced in the region.

xi) Poverty Indicators**Toilet Facilities**

The majority of the agricultural households in Singida region used the traditional pit latrine (94.4%) with a limited use of other types of toilet facilities including flush toilets (0.6%). About 3.6 % of the households did not have toilet facilities.

Household Assets

Most of the households owned radios (61.5%) followed by bicycles (48%), mobile phones (24.1%), iron (20.8%), wheelbarrows (7%) and vehicles (5.6%).

Access to Drinking Water

The main sources of drinking water for the majority of the households were the unprotected wells/springs with 35.2 % of the households, piped water (16.6%), protected wells (16.1%) and surface water such as a dams, rivers or lakes (14.5%).

Sources of Energy for Lighting

Wick lamp was the most common source of energy for lighting used by 80.1 % of the households followed by hurricane lamp (11.6%), firewood (3.8%) and pressure lamp (2.5%).

Sources of Energy for Cooking

The most common source of energy for cooking was firewood used by 92.3 % of the households. The second common source was crop residue (4.6%) followed by charcoal (2.5%).

Roofing Material

Grass roofing was used in all the districts by between 1.5% and 7.6% of the households in the region. Singida Urban district had the lowest proportion of houses roofed using grasses or leaves (1.5%) and Manyoni district had the highest proportion (10.1%) of the households roofed with grass or leaves.

Number of Meals per Day

On the average, the majority of the households (62%) in the region took two meals per day followed by households that took an average two meals per day (36%). A relatively small proportion (2%) survived on one meal per day.

Meat and Fish Consumption Frequency

The frequency of consumption of meat and fish were almost similar in all the districts. Relatively, large numbers of households did not eat meat or fish once a week. The number of households was inversely proportional to the frequency of consumption. Generally, the number of households that ate meat or fish once a week was in the range of 17.4% in Manyoni to 32.4% in Iramba district.

Food Sufficiency

The district most affected by food insufficiency was Manyoni with 68 % of the households, followed by Singida Urban (67%), Singida Rural (56%). Iramba district had the lowest proportion of (51 %).

Main Sources of Cash Income

The main source of cash income for most of the rural agricultural households was the sale of food crops reported by 52.8 % of the households followed by sale of cash crops (16.6%),

1 BACKGROUND INFORMATION

1.1 Introduction

This part of the report presents a brief description of the regional profile by providing information on geographical location, land area, climate, administrative set up, population and socio-economic indicators. The information will provide the user with a general understanding of the region and its resources.

1.2 Geographical Location and Boundaries

Singida region is situated in the Central part of Tanzania. It lies between longitudes 33°27' and 35°26' east of Greenwich, and latitudes 3°52' and 7°34' south of the equator. Arusha region bounds the region to the north, Dodoma region to the east, Mbeya and Iringa regions to the south, Tabora region to the west and Shinyanga to the north-west.

The region has four districts namely; Iramba, Singida Rural, Manyoni and Singida Urban. The regional headquarters is located in Singida Urban district.

1.3 Land Area and Administrative Set-up

The four districts cover an area of 49,341 square kilometres, equivalent to about 6 percent of the total land area of Tanzania Mainland. The region is divided into three district councils namely; Iramba, Singida Rural and Manyoni and one town council located in Singida Urban.

1.4 Climate

1.4.1 Temperature

Temperature in the region ranges between 15°C and 30°C depending on season and altitude. The coldest period in the year is July while the hottest period is in October and November.

1.4.2 Rainfall

The average annual rainfall ranges between 500-800 millimetres. In normal circumstances, rainfall usually takes place from mid-November to end of April or early May every year.

1.5 Population

According to population projection based on the 2002 Population and Housing Census, the 2008 population of Singida stands at 1,294,584 inhabitants with an average population density of about 26 people per square kilometre.

2 INTRODUCTION

This section provides technical and operational description of the National Sample Census of Agriculture (NSCA), carried out in the rural areas of Tanzania Mainland and Tanzania Zanzibar during the 2007/08 agricultural year. It details the background and the rationale for carrying out the NSCA in 2007/08 agricultural year. It also explains the sampling procedures, designing and implementation of the data processing system.

This report (Volume Vm) is among the 21 regional reports for the Mainland. Other census reports include the Technical Report (Volume I), Crop Sector Report at National level (Volume II), Livestock Report at National level (Volume III), Large Scale Farms Report (Volume IV), Regional Reports (Volume V series), Zanzibar Livestock Report (Volume VI) and Zanzibar Crop Sector Report (Volume VII). Unlike the 2002/03 Agricultural Sample Census, the 2007/08 Sample Census does not have a separate report for Smallholder Household Characteristics and Access to Natural Resources Report. Other thematic reports will be produced depending on the demand and availability of funds.

This report is divided into five main sections; Background Information, Introduction, Census Results, District Profiles and Appendices. The definitions relating to all aspects of this report can be found in the questionnaire.

2.1 The Rationale for Conducting the National Sample Census of Agriculture

The Government of Tanzania has embarked on various plans geared to eradicate poverty by the year 2025 and Tanzania Zanzibar by the year 2020. In order to facilitate intervention and monitoring activities of the Poverty Monitoring Master Plan, the government has planned a series of censuses and surveys to assist in policy formulation, planning and to track changes in the wellbeing of the population of Tanzania. In this Master Plan, a series of Agricultural Censuses have been planned, the first one was undertaken in 2002/03 agricultural year and the second in 2007/08.

Demands for reliable and timely agricultural data have become significantly increasing for monitoring outcomes and progress of the poverty monitoring tools like the Agricultural Sector Development Programme (ASDP) and performance of the respective MDAs (ASLMs).

Following the decentralization of the Government's administration and planning functions, there has been a pressing need for agricultural and rural development data disaggregated at regional and

district level. The provision of district level estimates will provide essential baseline information on the state of agriculture that supports decision making by the Local Government Authorities and in the design of District Agricultural Development and Investment Projects (DADIPS). The increase in investment is an essential element in the national strategy for growth and reduction of poverty.

2.2 Census Objectives

The 2007/08 Agricultural Sample Census was designed to meet data needs of a wide range of users down to the district level including policy makers at local, regional and national levels, rural development agencies, funding institutions, researchers, NGOs, farmers organizations, and the like. The dataset is both extensive in its sample and detailed in its scope and coverage to meet the user demand.

The census was carried out in order to:

- Identify structural changes, in the size of farm household holdings, crop and livestock production, farm inputs and implement use. It also seeks to determine if there are any improvements in the rural infrastructures and the level of agricultural household living conditions,
- Provide benchmark data on productivity, production and agricultural practices in relation to policies and interventions promoted by the Ministry of Agriculture and Food Security and other stakeholders, and
- Establish baseline data for the measurement of the impact of high level objectives of the Agricultural Sector Development Programme (ASDP), National Strategy for Growth and Reduction of Poverty and other rural development programmes and projects.

2.3 Census Scope and Coverage

The 2007/08 Agricultural Sample Census was conducted for both large and small scale farms. The data was collected from a sample of 52,635 small scale agricultural households of which 48,880 were from the Mainland and 4,755 from Zanzibar. To meet National estimates, data was also collected from 1,006 Large Scale Farms (968 on the Mainland and 38 in Zanzibar) on a complete enumeration basis.

Three different questionnaires were used to collect data on agriculture and related aspects. These were:

- Small scale farms questionnaire;
- Community questionnaire; and
- Large scale farm questionnaire.

The small scale farm questionnaire was the main census instrument which included questions related to crop and livestock production and practices; population demographics; access to services; resources and infrastructure; issues on poverty and gender. Main subjects covered during the study include:-

- Household demographics and activities of the household members;
- Land access/ownership/tenure and use;
- Crop and livestock production and productivity;
- Access to inputs and farming implements;
- Access and use of credits;
- Crop marketing, storage;
- Fish farming;
- Investment activities: Irrigation structures, water harvesting, erosion control;
- Off farm income;
- Household living conditions (housing, sanitary facilities, etc);
- Livelihood constraints; and
- Poverty Indicators.

The community level questionnaire was designed to collect village data such as access and use of common resources, community tree plantation and seasonal farm gate prices.

Large scale farms questionnaire was administered to all large scale farms either privately or corporately managed. However, the analysis of Large Scale Farms is presented in a separate report (Volume IV).

2.4 Census Methodology

The main focus at all stages of the census execution was on data quality and this has been emphasized all the time. The main activities undertaken include:

- Census organization;

-
- Tabulation plan preparation;
 - Sample design;
 - Design of census questionnaire and other instruments;
 - Pilot test;
 - Training of trainers, supervisors and enumerators;
 - Information Education and Communication (IEC) campaign;
 - Data collection;
 - Field supervision and consistency checks;
 - Data processing:
 - Scanning,
 - Structure formatting application,
 - Batch validation application,
 - Manual data entry application,
 - Tabulation preparation using SPSS;
 - Table formatting and production of charts using Excel, maps generation using Arc GIS and Excel, Report preparation using Ms Word and Excel.

2.4.1 Census Organization

The census was conducted by the National Bureau of Statistics (NBS) in collaboration with Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; and the Prime Minister's Office, Regional Administration and Local Government in Tanzania Mainland. The Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources, Livestock and Fisheries in Tanzania Zanzibar.

At the national level, the census was headed by the Director General of the National Bureau of Statistics, Tanzania Mainland in collaboration with the Chief Government Statistician, Tanzania Zanzibar. The Planning Group formed by the Director General of NBS and the Chief Government Statistician consisted of staff from the Department of Agriculture Statistics of NBS, Department of Economic Statistics of OCGS, Department of Policy and Planning of the Ministry of Agriculture, Food Security and Cooperatives, Department of Policy and Planning of the Ministry of Livestock and Fisheries Development in the Mainland. Ministry of Livestock and Fisheries and the Ministry of Agriculture and Natural Resources in Zanzibar.

The Planning Group was responsible for all the census operations. Implementation of the census activities at the regional level was overseen by the Regional Statistical Managers of NBS and the Regional Agricultural Supervisors from the Prime Minister's Office, Regional Administration and Local Government. At the district level, the census activities were managed by two supervisors from the Prime Minister's Office, Regional Administration and Local Government (PMO-RALG). The supervisors managed the enumerators who also were from PMO-RALG. As for Zanzibar, implementation of the census activities at the regional level was overseen by the Regional Statistical Officers and Regional Agricultural Officers. At District level, implementations of the census activities were managed by District Agricultural Development Officers (DADOs). In addition, there was a national mobile team to supervise the census operations.

The Censuses and Surveys Technical Working Group (CSTWG) under MKUKUTA provided support in sourcing financing, approving budget allocation and monitoring progress of the census. A Technical Committee for the census was established with members from key stakeholder organizations and its main function was to approve the proposed instruments and procedures developed by the Planning Group. It also approved the tabulation and analytical reports prepared from the census data.

2.4.2 Tabulation Plan Preparation

The tabulation plan was developed considering the tabulations from previous censuses and surveys to allow trend analysis and comparisons as well as the needs of end users.

2.4.3 Sample Design

The Mainland sample consisted of 3,192 villages. These villages were drawn from the National Master Sample (NMS) developed by the National Bureau of Statistics (NBS) to serve as national framework for the conduct of household based surveys in the country. The National Master Sample was developed from the 2002 Population and Housing Census. The total Mainland sample was 47,880 agricultural households. In Zanzibar, a total of 317 Enumeration Areas (EAs) were selected and 4,755 agricultural households were covered. National wide, all regions and districts were sampled except four urban districts (three from Mainland and one from Zanzibar).

In both Mainland and Zanzibar, a two stage sample was used. The number of villages/Enumeration Areas (EAs) was selected for the first stage with a probability proportional to the number of villages/EAs in each district. In the second stage, 15 households were selected from a list of

households in each village/EA using systematic random sampling. Table 2.1 gives the sample size of households, villages and districts for the Mainland and Zanzibar.

2.4.4 Questionnaire Design and Other Census Instruments

The questionnaire was designed following users meetings to ensure that the questions asked were in line with the users data needs. Several features were incorporated into the design of the questionnaire to increase the accuracy of the data as follows:

Table 2.1 Census Sample

Description	Mainland	Zanzibar	Total
Households	47,880	4,755	52,635
Villages/EAs	3,192	317	3,509
Districts	133	9	142
Regions	21	5	26

- Where feasible, all variables were extensively coded to reduce post enumeration coding errors;
- The definitions for each section were printed on the opposite page so that the enumerator could easily refer to the instructions whilst interviewing the respondent;
- The responses to all the questions were placed in boxes printed on the questionnaire, with one box per character. This feature made it possible to use scanning and Intelligent Character Recognition (ICR) technologies for data capture;
- Skip patterns were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent; and
- Each section was clearly numbered, which facilitated the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS.

Three other instruments were used:

- Village Listing Forms were used for the listing of households in the village/EA and from this list, a systematic sample of 15 agricultural households were selected;
- A training manual which was used by the trainer for the cascade/pyramid training of supervisors and enumerators; and
- Enumerator's Instructions Manual was used as reference material.

2.4.5 Field Pilot-Testing of the Census Instruments

The questionnaire was pilot-tested in four locations (Arusha, Dodoma, Unguja and Pemba). This was done to check the wording, flow and relevance of the questions and to finalize crop lists, questionnaire coding and manuals. In addition, several data collection methodologies had to be finalized, namely; livestock numbers in pastoral communities, mixed cropping, use of percentages in the questionnaire and finalizing skip patterns and documenting consistency checks.

2.4.6 Training of Trainers, Supervisors and Enumerators

During the training, a cascade/pyramid training techniques were employed to maintain statistical standards. The top level of training was provided to 78 national and regional supervisors (65 from Mainland and 13 from Zanzibar). The trainers were members of the Planning Group from the National Bureau of Statistics, the sector Ministries of Agriculture and Office of the Chief Government Statistician, Zanzibar. In each region, three training sessions were conducted for the district supervisors and enumerators. The training concentrated on questionnaires, listing forms, field level census methodology and definitions. Emphasis was placed on consistency checking in the field. Tests were given to the enumerators and supervisors and the best 50 % of the trainees were selected for the actual field work. The remaining 50% were assigned the work of listing the households in the villages they belong and they were later terminated. The best trained enumerators were assigned to list the remaining villages. Each enumerator was assigned to enumerate two villages.

2.4.7 Information, Education and Communication (IEC) Campaign

Radios, televisions, newspapers, leaflets, t-shirts and caps were used to create awareness of the Agricultural Sample Census to the public. This strategy helped in sensitizing the public for the field level activities in order to increase the response rate. The t-shirts and caps were given to the field staff and village chairpersons. The village chairpersons assisted to locate the selected households.

2.4.8 Data Collection

Data collection activities for the 2007/08 Agricultural Sample Census lasted for three months from June to August 2009. The direct interview method was used to collect data during the enumeration. Data collection was monitored by a hierarchical system of supervisors which included the Mobile Response Team, Regional and District Supervisors. The Mobile Response Team headed by the Manager of Agriculture Statistics Department, provided the overall direction to the field operations

and responded to queries arising outside the scope of the training exercise. Decisions made on the definitions and procedures were then communicated back to all the enumerators via the Regional and District Supervisors. On the Mainland, each region had 2 Regional Supervisors (total of 42) and 2 district supervisors per district, (Total 266).

District supervision and enumeration were performed by staff from the Prime Minister's Office, Regional Administration and Local Government and the sector Ministry of Agriculture (PMO-RALG). Regional and national supervision was provided by senior staff from the NBS and sector Ministries of Agriculture. In Zanzibar, the enumeration was conducted by staff from the Ministry of Agriculture and Natural Resources and Ministry of Livestock and Fisheries. Supervision was provided by senior officers of the same Ministries and the Office of the Chief Government Statistician.

During the household listing exercise, some 3,192 extension staff participated on the Mainland. A total of 177 enumerators participated during the listing exercise and enumeration using the small holder questionnaire in Zanzibar. A total of 1,596 enumerators were involved in data collection using the small holder questionnaire on the Mainland. Additional 5 % of the enumerators were held as reserves in case of drop outs during the enumeration exercise.

2.4.9 Field Supervision and Consistency Checks

Enumerators were trained to probe the respondents until they were satisfied with the responses before they recorded them in the questionnaire. The first check on the questionnaire was carried out by the enumerators in the field during enumeration, followed by District, Regional and National supervisors. Supervisory visits at all levels of supervision focused on checking the completeness of the questionnaires and consistency. Inconsistencies encountered were corrected, and where necessary, a call back to the respondent was made by the enumerator to obtain the correct information. Further quality control checks were made by the district supervisors.

2.4.10 Data Processing

Data processing involved the following process:

- Data entry;
- Data structure formatting;
- Batch validation; and
- Tabulation.

Data Entry

Scanning and ICR data capture technology was used. This did not only increase the speed of data entry but also increased the accuracy due to reduction of keystroke errors. Interactive validation routines were incorporated into the ICR software to trap errors during the verification process.

Prior to scanning, all the questionnaires underwent a manual cleaning exercise by checking that the questionnaire had a full set of pages, correct identification and good hand-writing. A score was given to each questionnaire based on the legibility and the completeness of enumeration. This score was used to assess the quality of enumeration and supervision. CSPro was used for data entry of the questionnaires that were rejected by the ICR extraction application.

Batch Validation

A batch validation program was developed in CSPro in order to identify inconsistencies within a questionnaire. This was in addition to the interactive validation during the ICR extraction process. The procedures varied from simple range checking within each variable to more complex checking between variables. After data cleaning, the tables were prepared based on a pre-designed tabulation plan.

Tabulation

Statistical Package for Social Sciences (SPSS) was used to produce the census tables and Microsoft Excel was used to organize the tables and compute the additional indicators. Excel was also used to produce charts while Arc GIS was used for generating the maps.

Report Writing

The report writing focused on the regional comparisons, time series and national estimates. Microsoft Excel was used to produce charts; Arc GIS and Excel were used to generate maps, whereas Microsoft Word was used in compiling and report writing.

Data Quality Control

A great deal of emphasis was placed on data quality throughout the whole exercise, from planning; questionnaire design, training, supervision, data entry, validation and cleaning/editing. As a result of this, it is believed that the census is highly accurate and representative of what was experienced at the field level during the census year. With very few exceptions, the variables in the questionnaire are within the norms for Tanzania and they follow the expected time series trends when compared to historical data.

2.5 Funding Arrangements

The 2007/08 Agricultural Sample Census was supported mainly by the Department for International Development (DFID) and the Japan International Cooperation Agency (JICA) which together, financed most of the operational activities. Other funds for the census activities were from the Government of Tanzania. In addition, technical assistance was provided by the Food and Agriculture Organisation (FAO).

3 CENSUS RESULTS

This part of the report presents results of the 2007/08 Agricultural Census for Singida region. The census results are based on the data tables presented in Appendix tables. They are presented in different formats including brief summaries, charts, condensed tables, graphs and s in order to make it easier for the users to understand. Comparisons are made between related variables and between districts. Comparisons are also made with past censuses particularly the 2002/03 agricultural census results. The presentation of the results is divided into four main sections which are; household characteristics, crop results, livestock results and poverty indicators.

3.1 Household Characteristics

3.1.1 Types of Agricultural Households

The total number of agricultural households in Singida region (Table 3.1) was 216,992. The majority (115,701 households equivalent to 54% of the total agricultural households) were involved in both crop and livestock production, followed by households that were involved in crops only (100,468 household, 46%), livestock only (617 household) and pastoralists (206 household), each with less than one percent, (Chart 3.1).

The highest density of agricultural households was in Singida Urban district with 496 households/sq km followed by Singida Rural (410 households/sq km) and Iramba (355 households/sq km). Manyoni district had the least population density of 211 households/sq km.

Table 3.1 Agricultural Households by Type and District

District	Crops Only	Livestock Only	Pastoralists	Crops & Livestock	Total
Iramba	28,229	0	0	44,591	72,819
Singida Rural	36,076	0	0	51,414	87,490
Manyoni	29,324	617	206	11,524	41,672
Singida Urban	6,839	0	0	8,173	15,011
Total	100,468	617	206	115,701	216,992

3.1.2 Livelihood Activities

The majority of the agricultural households (205,633 households, 95%) in Singida region ranked annual crop farming as the activity that provided most of their cash income, followed by employment (6,221 households, 3%) off-farm income (2,254 households, 1%) and herding 1,954 households. The remaining proportion of the households earned their income through off-farm income activities, (Table 3.2).

Table 3.2 Heads of Households Main Occupation

District	Crop Farming		Livestock Keeping / Herding		Fishing		Employment		Off-Farm Income		Total	
	Number	%	Number	%	Number	%	Number	%	Number	%	Number	%
Iramba	68,504	94	180	0	180	0	2,337	3	1,618	2	72,819	100
Singida Rural	84,898	97	0	0	648	1	1,728	2	216	0	87,490	100
Manyoni	38,276	92	1,441	3	103	0	1,543	4	309	1	41,672	100
Singida Urban	13,955	93	334	2	0	0	612	4	111	1	15,011	100
Total	205,633	95	1,954	1	931	0	6,221	3	2,254	1	216,992	100

3.1.3 Age and Sex of Household Members

Members of agricultural households were distributed over the entire range of age brackets in comparable proportions, (Chart 3.2). However, the female population was more prevalent in at the younger age brackets of 26-39 while the male population was more prevalent in the older age brackets of 50-54, and 75-84 years. This implies that females are more likely to be the major workforce for agricultural activities in the region.

On the other hand, females were also most prevalent in the oldest age bracket of above 85 years.

3.1.4 Literacy

Literacy as used in this report means the ability of an individual to read and write in Kiswahili. Or English. The average literacy level of the agricultural household members was 75 % with Singida Urban district having the highest literacy level of 80 % and Manyoni district having the lowest literacy level of 74 % (Chart 3.3).

Literacy of Heads of Household

In each district, the average literacy rate for male heads of household was much higher than that of female heads. The literacy rates for male heads of household ranged between 79 % in Iramba district and 88 % in Singida Urban district while the rates for female heads ranged between 49 % in Iramba district and 62 % in Manyoni district, (Chart 3.4)

3.1.5 General Educational Status

The general education status of the districts is summarized on the basis of having attended and completed primary education (completed), attending school at the time of the census (attending school) or had never attempted schooling (never attended school). The general education status indicates averages of the members of Agricultural households 35% were attending school, 43% had completed school and 22% had never attended school (Chart 3.5)

District wise, the proportion of the population aged 5 years or more, that completed school was the highest for Singida Urban (46%) and the lowest for Iramba district (42%) while in the category of never attended school, the highest proportion was in Manyoni (25%) and the lowest was in Singida Urban district (15%). The population that was attending school ranged from the lowest of (29%) in Manyoni district to the highest (40%) in Singida Urban district, (Chart 3.6).

The level of education attained by heads of agricultural households in the region was predominantly Primary Education (159,415 households, 73%), followed by Post Primary Education (5,922 households, 3%) and Adult Education (1,432 households, 1%). However, the remaining 50,223 households or 23% had no education, (Chart 3.7).

3.2 Land Use

This section describes the situation with regard to the available land area for general use and the extent to which the land is utilized for agricultural activities. *Available land* as used in this context refers to the total area of land available to households through customary law and other forms of

ownership. *Usable land*, on the other hand, is the parcel of land available less the parcels that cannot be used for being rocky, water bodies, swampy or steep slopes. Within the usable land, the *planted area* is the total area planted with crops in a particular agricultural year.

3.2.1 Area of Land Utilized

The total usable land available was 639,999 hectares. The district with the largest usable land was Singida Rural (212,811 ha, 33.3% of the total available usable land in the region) followed by Iramba (204,223 ha, 31.9%) and Manyoni (192,870 ha, 30.1%). Singida Urban had the smallest usable land area available (30,096 ha, 4.7%).

The usable land area per household in all the districts (except Singida Urban district), was more than 2 hectares per household. The largest usable land area available per household was in Manyoni (3.7 ha/household) followed by Iramba district (2.4 ha/household) and Singida Rural (2 ha/household). However, the average land utilization rate was above 70 percent. The highest land utilization was in Iramba district at 94.3 percent, (Chart 3.8 and 3.06).

3.2.2 Types of Land Use

The area under temporary mono crops occupied the largest part of the usable land area (336,891 hectares, 52.4% of the usable land in the region) followed by temporary mixed crops (127,821 ha, 19.9%) and area kept under pasture (57,827 ha, 9%).

The land area left under fallow occupied 49,788 ha (7.7%) and much smaller land areas were either uncultivated, under natural bush, rented to others or planted with mixtures of annual and permanent crops. All other types of land use were insignificant, (Chart 3.9).

The total planted area in the region was 544,565 ha of which, 192,521 ha (35.4%) were in Iramba district, 186,923 ha (34.3%) were in Singida Rural, 139,162 ha (25.6%) were in Manyoni and 25,960 ha (4.8%) were in Singida Urban, (Chart 3.8).

3.3 Annual Crops And Vegetable Production

The region normally receives only one season of rainfall namely; the long rainy season. Therefore, the agricultural households in the region planted their annual crops during this season.

3.3.1 Area Planted

The planted land area per household was 2.5 ha in Iramba district which was almost comparable to that of Manyoni district (2.4 ha/household). The planted land area per household in Singida Rural was 1.9 hectares and that of Singida Urban was 1.4 hectares, (Chart 3.10).

Analysis of Main Crops

The main crops produced in the region have been categorized on the basis of their relative importance, for both annual and permanent crops followed by a more detailed analysis of individual crop and crop type.

3.3.2 Main Crops

The main crops in the region (Chart 3.11) comprised of cereals mostly maize, sorghum, bulrush millet, paddy and finger millet occupied 68 % of the total planted area; oil seeds and oil nuts planted on a 26 % of the planted area and pulses planted on a 4 % of the planted area. Other crops of minor importance were roots and tubers, fruits and vegetables, each occupying about 1 % of the total planted area. The planted area per household was the largest for chick peas (1.43 ha/household), followed by paddy (1.14 ha/household), sunflower (1.1 ha/household) and maize (1.04 ha/household). However, for each of the remaining main crops, the area planted per household was less than an acre, (Chart 3.12)

3.3.3 Crop Types

3.3.3.1 Cereal Crops Production

Cereals were the main crop types grown in Singida region. The area planted with cereals was 316,614 (68% of the total planted area) followed by oil seeds and oil nut crops (120,237 ha, 26%). Other crop types were pulses (16,560 ha, 4%), roots and tubers (6,826 ha, 2%), cash crops (4,353 ha, 1%) and fruits and vegetables (3,534 ha, 1%), (Chart 3.13).

Maize had the largest planted area (150,240 ha, 33%) planted by 144,016 households, (66% of the total crop growing households). The situation in 2007/08 shows a slight decline compared to 2002/03 agricultural year when the area planted with maize constituted 43 % of the total area planted with annual crops in the region. Sunflower was the second crop planted on (99,363 ha, 22%) planted by 89,975 households, followed by sorghum (97,513 ha, 21%) planted by 108,206 households and bulrush millet (48,891 ha, 11%) planted by 58,960 households.

Other relatively important crops were groundnuts planted by 30,982 households on 15,376 ha (3%) and paddy planted by 11,425 households on 13,066 ha (3%). Maize, sorghum, bulrush millet, paddy, sunflower and groundnuts combined, accounted for 93% of the total area planted with annual crops. The remaining 7% of the land area was planted with a variety of other annual crops on relatively smaller areas, (Chart 3.14).

Paddy had the largest planted area per household (1.14 ha/household), followed by maize (1.04 ha/household), sorghum (0.9 ha/household), bulrush millet (0.83 ha/household) and finger millet (0.75 ha/household). Wheat was the least important cereal crop in the region (0.41

ha/household), (Chart 3.15).

Among the major cereals, maize was planted by the largest number of households (144,016 households, 29% of the households), followed by sorghum (108,206 households, 21.8%), bulrush millet (58,960 households, 11.9%), paddy (11,425 households, 2.3%) and finger millet (9,070 households, 1.8%).

Table 3.3 Area, Production and Yield of Cereal Crops

Crop	Wet Season			Total		
	Area Planted (ha)	Quantity harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (kg/ha)
Maize	150,240	190,491	1.3	150,240	190,491	1.3
Paddy	13,066	15,051	1.2	13,066	15,051	1.2
Sorghum	97,513	111,959	1.1	97,513	111,959	1.1
Bulrush Millet	48,891	36,903	0.8	48,891	36,903	0.8
Finger Millet	6,830	6,227	0.9	6,830	6,227	0.9
Wheat	73	65	0.9	73	65	0.9
Barley	-	-	-	-	-	-
Total	316,613	360,969		316,613	360,969	

The results show that the preference for maize over other cereal crops has been maintained since 2002/03 agricultural year when the planted area with cereals constituted 76.4% of the total area planted with the annuals. Maize was the dominant annual crop with a planted area of 150,240 hectares followed by Sorghum with a planted area of 97,513 hectares.

Yields for all the cereals had an average of one ton per hectare, whereby bulrush millet had the lowest yield (0.8 t/ha) and maize had the highest yield (1.3 t/ha) among the cereal crops. The total production of cereals was 360,696 tonnes and maize alone contributed 190,491 tons (52.8%) of the total cereals harvested followed by sorghum (111,959 tone, 31%). The remaining 58,246 tone or 15.9 % of the total harvested grains were mostly from paddy, bulrush millet and finger millet while wheat had a small harvest of 65 tone (0.2%), (Table 3.3).

Maize

Maize was planted in all the districts by a total of 144,016 households and a total planted area of 150,240 hectares. The district with the largest area planted with maize was Iramba with 58,267 hectares or 38.8 % of the total area planted with maize in the region (Chart 3.16 and map 3.08). The crop was also planted by the largest number of households (55,558 household, 38.6% of maize growing households) in the region.

Singida Rural had the second largest area (48,407 ha, 32.2%) planted with maize which involving 53,358 households (37.1%) followed by Manyoni (41,472 ha, 27.6%) involving 31,485 households (21.9%). The smallest planted area with maize (2,095 ha, 1.4%) was in Singida Urban district. However, for the planted area per household (Chart 3.16 and map 3.09),

Manyoni district had the largest planted area per household (1.3 ha/household) while Singida Urban had the smallest planted area per household (0.6 ha/household).

Sorghum

Sorghum was planted on a total area of 97,513 hectares. The largest planted area with the crop was in Iramba district (42,121 ha, 43% of the total area planted with sorghum in the region), followed by Singida Rural (38,859 ha, 40%), Manyoni (11,916 ha, 12%) and Singida Urban district (4,617 ha, 4.7%), (Chart 3.17 and 3.10).

With regard to the number of households which planted the crop, Singida Rural district had the largest number of households (50,766 households, 46.9%) followed by Iramba district (36,859 households, 34.1%). Most of the districts had less than one hectare per household. However, the largest planted area per household was in Iramba district with 1.1 hectares per household and smallest in Singida Urban with 0.6 hectares per household, (Map 3.11).

Yields were the highest in Iramba district with 1.42 tons per hectare followed by Manyoni with 91.18 tons per hectare. The yields in both Singida Rural and Singida Urban districts were below one ton, the lowest being 0.68 tons per hectare in Singida Urban district, (Map 3.10).

Bulrush Millet

The district with the largest area planted with bulrush millet was Singida Rural (23,743 ha, 48.6% of the total crop planted area) followed by Iramba district (13,558 ha, 27.7%) and Singida Urban (9,353 ha, 19.1%). Bulrush millet was a minor crop in Manyoni district.

The planted area per household was the largest in Iramba district with 1.1 hectares per household), followed by Manyoni (one ha/household), Singida Urban (0.8 ha/household) and Singida Rural with 0.7 hectare per household, (Chart 3.18).

Paddy

Paddy was planted by 11,425 households. Singida Rural district had the largest planted area in the region (8,396 ha, 64.3%) followed by Manyoni (3,292 ha, 25.2%) and Iramba (1,274 ha, 9.8%). However, paddy production in Singida Urban was almost negligible (Chart 3.19). About 4,836 households or 43.3% of the crop growing households were located in Manyoni district followed by Singida Rural (4,320 households, 37.8%) and Singida Urban (111 households, 1%).

The average planted area per household (Chart 3.19) was largest in Singida Rural (1.9 ha/household) followed by Singida Urban (0.9 ha/household), Manyoni (0.7 ha/household) and Iramba (0.6 ha/household).

Finger Millet

Finger millet was grown predominantly in Singida Rural district (Chart 3.20). The total planted area was about 6,830 hectares and Singida Rural district had the largest planted area with the crop (5,308 ha, 77.7%). A total of 9,070 households planted the crop in the region, mostly located in Singida Rural district (6,913 households, 76.2%), and the remaining 23.8%

was distributed between Singida Urban, Manyoni and Iramba districts, (Chart 3.20). The average planted area per household was the largest in Manyoni (1.1 ha/household) followed by Singida Rural (0.8 ha/household), Singida Urban (0.6 ha/household) and Iramba (0.4 ha/household), (Chart 3.20).

Other Cereals

The only other cereal planted in the region was wheat, planted on a total of 73 hectares with an average yield of 0.9 tons per hectare. In view of the limited planted area, wheat was a very minor cereal in the region.

3.3.3.2 Oil Seeds and Oil Nuts Production

Oil seed and oil nut crops were planted on a total of 120,237 hectares equivalent to 22.1 % of the total planted area in the region. Sunflower had the largest planted area (99,363 ha, 82.6% of the total area planted with oil seed crops) followed by groundnuts (15,376 ha, 13%), and simsim (5,498 ha, 4.6%), (Table 3.4 and Chart 3.21).

Table 3.4 Area, Production and Yield of Oil Seeds and Oil Nuts

Crop	Wet Season			Total		
	Area Planted (ha)	Quantity harvested tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested tons)	Yield (kg/ha)
Sunflower	99,363	68,297	0.7	99,363	68,297	0.7
Simsim	5,498	2,789	0.5	5,498	2,789	0.5
Groundnuts	15,376	9,614	0.6	15,376	9,614	0.6
Total	120,237	80,700		120,237	80,700	

A total of 127,863 households planted oil seed crops, out of which, 89,975 households (70.4%) planted sunflower, (30,892 households, 24.2%) planted groundnuts and the remaining households planted simsim. However, productivity was highest for sunflower with an average yield of 0.69 tons per hectare followed by groundnuts (0.63 t/ha) and simsim (0.51 t/ha).

The total harvested quantities for oil seed and oil nut crops were 80,700 tons of which, sunflower had the largest production (68,297 tons, 84.6% of the total harvested oil seeds) followed by groundnuts (9,614 tons, 11.9%) and simsim (2,789 tons, 3.5%), (Table 3.4).

Sunflower

Sunflower was planted in all the four districts (Chart 3.22) on a total area of 99,363 hectares or 18.2 % of the total planted area in in the region and involving a total of 89,875 households. Iramba district had the largest planted area (52,793 ha, 53%) followed by Singida Rural (32,019 ha, 32%), Manyoni (11,389 ha, 12%) and Singida Urban (3,161 ha, 3%), (Chart 3.22 and Map 3.12).

Iramba district had the largest number of households that planted sunflower (39,376 households, 43.8%) and Singida Urban had the smallest number of sunflower growing households (3,225 households, 3.6%).

The planted area per household was largest in Iramba district with 1.3 hectares per household followed by Singida Urban (0.98 ha/household), Manyoni (0.97 ha/household) and Singida Rural (0.9 ha/household), (Chart 3.22 and Map 3.13).

Sunflower productivity was the highest in both Iramba and Singida Rural districts, each with 0.7 tons per hectare. Manyoni district had the lowest productivity of 0.52 tons per hectare (Map 3.12). Out of the total harvested quantity of 68,297 tons, Iramba district had the largest share of the harvested quantity (38,049 tons, 55.7%) compared to Singida Rural (32.8%), Manyoni (8.7%) and Singida Urban (2.7%).

Groundnuts

Groundnuts were planted in Iramba, Manyoni and Singida Rural districts (Chart 3.23) on a total of 15,376 hectares (2.8% of the total planted area in the region) by a total of 30,892 households. The largest planted area was in Manyoni district (9,105 ha, 58.6% of the total planted area in the region) equivalent to 6.5% of the total planted

area in the district followed by Iramba district (3,549 ha, 23.1%) and Singida Rural district (2,723 ha, 17.7%). However Singida Urban district did not grow groundnuts.

The 30,892 groundnuts growing households were distributed as follows: Manyoni (60.3%), Iramba (25%) and Singida Rural (14.7%).

Groundnut productivity was almost similar in all the districts, at an average of 0.6 tons per hectare. The total quantity of harvested groundnuts was about 9,614 tons, Manyoni district having contributed 59.5% of the total harvested quantity as compared to Iramba (22.6%) and Singida Rural (17.9%).

The average planted area in all the districts was less than a hectare. The planted area per household was the largest in Singida Rural (0.6 ha/household), followed by Manyoni (0.49 ha/household) and Iramba district (0.46 ha/household), (Chart 3.22)

3.3.3.3 Pulses Crop Production

The types of pulses grown in the region comprised of beans, chick peas, green grams, bambaranuts and cowpeas, (Table 3.5 and Chart 3.24). Pulses are grown primarily for grain except for cowpeas and beans, for which the leaves are also consumed as vegetables.

Table 3.5 Area, Production and Yield of Pulses

Crop	Wet Season			Total		
	Area Planted (ha)	Quantity harvested(tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (kg/ha)
Beans	6,420	8,965	1.4	6,420	8,965	1.4
Cowpeas	1,264	555	0.44	1,264	555	0.44
Green gram	1,527	1,589	1.04	1,527	1,589	1.04
Chick peas	5,949	3,270	0.55	5,949	3,270	0.55
Bambaranuts	1,401	1,776	1.27	1,401	1,776	1.27
Total	16,560	16,156	0.98	16,560	16,156	0.98

A total of 16,560 hectares (3% of the total planted area in the region) were planted with pulses (Chart 3.24) involving a total of 29,273 households (29.1% of the crops-only households in the region). The major pulse crops were beans and chick peas. Beans occupied the largest planted area (6,420 ha, 38.8% of the total area planted with pulses in the region) and was planted by the largest proportion of the pulse growing households (14,084 households, 48.1%) followed by chick peas (5,949 ha, 35.9%) planted by 4,168 households (14.2%). Other pulses grown in the region included green grams (1,527 ha, 9.2%) planted by 2,171 households (7.4%); bambaranuts (1,401 ha, 8.5%) planted by 3,780 households (12.9%) and cowpeas (1,264 ha, 7.6%) planted by 5,069 households (17.3%), (Chart 3.24 and Table 3.5).

The planted area per household was highly variable with chick peas having the largest planted area per household (1.43 ha/household), followed by green gram (0.7 ha/household), beans (0.46 ha/household), bambaranuts (0.37 ha/household) and cowpeas (0.25 ha/household), (Chart 3.25).

However, productivity was the highest for beans with an average yield of 1.4 tons per hectare followed by bambaranuts with an average yield of 1.27 tons per hectare, green gram (1.04 t/ha), chick peas (0.55 t/ha) and cowpeas (0.44 t/ha).

A total of 16,156 tons of pulses were harvested of which, beans contributed 8,965 tons or 55.5 % of the total harvested grains while chick peas accounted for 20.2%, bambaranuts (11%), green gram (9.8%) and cowpeas (3.4%) of the total harvested grains.

Beans

Beans were planted in all the districts except Singida Urban. The total area planted with beans was 6,420 hectares (1.2% of the total planted area in the region). Manyoni district had the largest planted area (92,910 ha, 45.3% of the total area planted with beans) followed by Iramba (2,155 ha, 33.6%) and Singida Rural district (1,356 ha, 21.1%), Manyoni district had the largest proportion of land planted with beans (2.1%), and Singida Rural district had the least proportion, (Chart 3.26).

The average planted area per household in each district was below one hectare, (Chart 3.27 and Map 3.14). The largest planted area per household was in Singida Urban (0.55 ha/household), followed by Singida Rural district (0.52 ha/household), Iramba (0.48 ha/household) and Manyoni district (0.42 ha/household).

The highest yield (Map 3.13) was in Iramba district (2 t/ha) and the lowest yield was in Manyoni district (0.97 t/ha). The yield in Singida Rural district was the second highest (1.4 t/ha).

Iramba district had the largest harvest of beans (4,254 tons, 47.5%) followed by Manyoni (2,810 tons, 31.3%) and Singida Rural district (1,901 tons, 21.2%)

Chick Peas

Chick peas were mostly planted in Iramba, Manyoni and Singida Rural districts. The total area planted with chick peas (Chart 3.28) was 5,949 ha (35.9% of the total area planted with pulses in the region). Manyoni district had the largest planted area (3,051 ha, 51.3% of the total area planted with chick peas) followed by Iramba (2,697 ha, 45.3%) and Singida Rural district (648 ha, 10.9%). Iramba district had the largest proportion of land planted with the crop (1.32%). Chick peas were not planted in Singida Urban district.

Manyoni district had the largest Planted area per household (Chart 3.29) at 3.71 ha/household) and Singida Rural had the smallest planted area per household (0.54 ha/household). Yield levels were in the range of 0.34 t/ha in Singida Rural to 0.62 t/ha in Iramba district. The total harvested quantity of 3,270 ton) was obtained mostly from Iramba and Manyoni districts, each with 48.2 % of the total harvest.

3.3.3.4 Roots and Tuber Crops Production

Cassava

Cassava was planted on 3,216 hectares most of which was planted in Manyoni district (2,729 ha, 84.9% of the total area planted with cassava) followed by Singida Urban (6.6%), Singida Rural (5.3%) and Iramba district (3.3%), (Chart 3.30 and Map 3.15). About 648 households that planted cassava were in Singida Rural (40.4%), while in Singida Urban, cassava growing households constituted 24.3%, in Iramba (22.5%), and Manyoni district (12.9%).

Cassava yields were highly variable between districts (map 3.15) ranging from 0.02 tons per hectare in Manyoni to 4.2 tons per hectare in Singida Rural district. A total of 1,309 tons were harvested and the major producing districts were Singida Rural (717 tons, 54.8%) and Iramba (379 tons, 29%).

The planted area per household (Chart 3.31 and map 3.16) was also highly variable ranging from 0.26 hectares per household in Singida Rural to 13.25 hectares per household in Manyoni district.

Sweet Potatoes

The total area planted with sweet potatoes in the region was 3,591 hectares with Iramba having the largest planted area (1,347 ha, 37.5% of the total area planted with sweet potatoes in the region) followed by Manyoni (1,288 ha, 35.9%), Singida Rural (750 ha, 20.9%) and Singida Urban (208 ha, 5.8%), (Chart 3.32).

A total of 9,812 households planted the crop in the region. The growing households followed a similar trend to the planted area whereby Iramba had the largest number of sweet potato growing

households (3,956 household, 40.3%) and Singida Urban had the smallest number (723 household, 7.4%).

Regardless of the planted area in the district, the land allocated for sweet potato in any district was less than one percent of the total planted area in the respective district. The highest was 0.93 percent in Manyoni and the lowest was 0.4 percent in Singida Rural district. The planted area per household was within the narrow range of 0.3 ha/household in Singida Urban and Iramba districts to 0.4 ha/household in Manyoni and Singida Rural districts, (Chart 3.33).

Sweet potatoes productivity (Chart 3.34) was the highest in Singida Urban district (3.3 t/ha) followed by Iramba district (3.0 t/ha), Singida Rural district (2.8 t/ha) and Manyoni district (2.3 t/ha). A total of 9,695 tons of sweet potatoes were harvested in the region. Iramba district produced 4,007 tons equivalent to 41.3 % of the total harvested quantity while Manyoni produced 30% and Singida Rural district accounted for 21.6%.of the total production.

3.3.3.5 Fruits and Vegetables

Fruits and vegetable crops were planted on less than one percent of the total planted area in the region (3,534 ha, 0.65% of the total planted area). The most dominant vegetable crops were onion with 1,564 hectares equivalent to 44.3 % of the total area planted with fruits and vegetables and okra which occupied 1,329 hectares or 37.6% of the total planted area. The remaining fruits and vegetable crops occupied about 641 hectares or 18.1% of the total planted area

Table 3.6 Planted Area and Yields of Fruits and Vegetables by crop

Crop	Number of Vegetable Growing Households	Planted Area (hectare)	Yield (t/Ha)
Okra	543	1,329	0.5
Turmeric	216	175	0.7
Bitteer Aubergine	180	36	1.8
Onion	3,455	1,564	1.8
Cabbage	167	42	20.5
Tomatoes	749	112	23.1
Spinach	56	6	4
Chillies	317	258	8.5
Amaranths	56	11	2.5
Total	5,739	3,533	

About 5,739 households planted fruits and vegetable crops in the region. The largest number of households (3,455 households, 60.2%) planted onion followed by tomato (749 household, 13.1%) and okra (543 households, 9.5%) and chilli (317 households, 5.5%). Other fruits and vegetable crops were planted by much fewer household, (Table 3.6).

With regard to yield (Chart 3.35), tomatoes were the most productive crop with 23.1 tons per hectare followed by cabbage (20.5 t/ha). The yield levels for most of the fruits and vegetable crops were relatively low except for chillies (8.5 t/ha), spinach (4 t/ha) and amaranths (2.5 t/ha).

The largest production (Chart 3.36) was from onion (2,760 tons, 29.7%) followed by tomatoes (2,596 tons, 27.9%) and chillies (2,187 tons, 23.5%). Other crops that contributed at least 5% of the total harvested produce were cabbage (9.3%) and okra (6.9%). All other crops contributed small and insignificant quantities to the total harvest.

Onion

Onion was the major vegetable crop planted in all the districts of Singida region, the total planted area with the crop was 1,564 hectares or 0.29 % of the total planted area in the region. The largest onion producing district in the region was Singida Rural where 1,224 hectares (78.3% of the total area planted with onion in the region) followed by Iramba (8.2%), Singida Urban (7.6%) and Manyoni district (6%), (Chart 3.37 and Map 3.17).

The yield of onion was the lowest in Singida Rural district (1.5 t/ha) compared to the other districts where the yields were within the range of 2.6 to 2.8 tons per hectare. Hence, the overall significant contribution of Singida Rural district to the total onions harvested (1,840.5 tons, 66.7% of the total harvested onions) was a function of the large planted area in this district.

The onion planted area per household was largest in Singida Rural district (0.52 ha/household), followed by Manyoni (0.46 ha/household), Singida Urban (0.35 ha/household) and Iramba district (0.24 ha/household), (Chart 3.38 and Map 3.18).

Okra

Okra was planted on a total of 1,329 hectares most of which (1,312 ha, 98.7% of the area planted with okra) was in Singida Rural district with the remaining 17 hectares (1.3%) planted in Singida Urban district (Chart 3.39). However, the yield was the highest in Singida Urban (2.3 t/ha) as compared to Singida Rural, (0.5 t/ha).

The total quantities harvested were 644 tons of which 94 % was produced in Singida Rural district. Planted area per household was relatively large in Singida Rural district (3.04 ha/household) and small in Singida Urban district (0.15 ha/household), (Chart 3.40).

Tomatoes

Tomatoes were grown in only two districts in the region i.e in Singida Urban and Iramba districts with almost equal planted areas. Singida Urban district had 58 hectares (51.8%) and Iramba had 54 hectares (48.2%), (Chart 3.41). However, proportionally, Singida Urban district allocated more land for tomato production (0.22%) as compared to Iramba district 0.03 percent.

The 749 tomato growing households in the region were also almost equally distributed in the two growing districts where by 52 % of the growers were in Singida Urban district and 48 % in Iramba district. Planted area per household in each district was in the average of 0.15 hectares per household.

Tomato yields were almost similar across the two growing districts (23 t/ha for both). However, Singida Urban had a production 1,337 tons equivalent to 51.5 % of the total production while Iramba district had a production of 1,259 tons (48.5%).

3.3.3.6 Production of Other Annual Crops

Other annual crops were planted on a total of 2,122 hectares comprised of cotton (2,122 ha, 49% of the total area planted with other annual crops) and tobacco (2,231 ha, 51%). Both of these are cash crops. A total of 4,114 households were engaged in growing these cash crops, of which 2,185 households (53% planted cotton and 47% grew tobacco), (Chart 3.42).

Tobacco

Tobacco was planted in Manyoni and Iramba districts only on a total area of 2,231 hectares. Manyoni was the major production district accounting for 96.7% (2,158 ha) of the total planted area and 90.7% of the total 1,929 growing households in the region, (Chart 3.43). Tobacco yield was higher in Manyoni district (1.03 t/ha) compared to Iramba district (0.89 t/ha). The contribution to the total (2,279 tons) of harvested tobacco was similarly higher in Manyoni (97.1%) compared to Iramba (2.9%).

Cotton

Cotton was planted in Manyoni and Iramba districts only on a total of 2,122 hectares. Iramba district was the major cotton production district accounting for 75.4% (1,601 ha) of the planted area. The area planted with cotton was equivalent to 0.83% of the total planted area in the district. In Manyoni district, the area planted with cotton was equivalent to 0.37% of the total planted area, (Chart 3.44).

The total number of cotton growing households in the region was 2,185 of which, 57.6 % were in Iramba district. The cotton planted area per household in Iramba district (1.27 ha/household) was more than twice that of Manyoni.

Cotton yield was higher in Iramba district where the yield level of 0.86 t/ha was almost twice that of Manyoni district (0.44 t/ha). Similarly, the bulk (85.8%) of the total harvested 1,603 tons of cotton was obtained from Iramba district as compared to 14.2% (227 tons) obtained from Manyoni district (0.56ha/household)

3.4 Permanent/Perennial Crops

Permanent crops, also referred to as perennial crops, normally require more than one season or year to mature and produce and would continue to do so for a number of seasons or years. In this report, crops that can mature and produce harvestable parts within one growing season or one year but can remain in the field and continue producing over several seasons are also considered as permanent crops. Examples of crops of this nature are crops such as banana and pigeon peas.

Permanent crops occupied about 10,830 hectares equivalent to 2 % of the planted area, (Chart 3.45) implying that, permanent crops in this region had a relatively small contribution to crop production.

The major permanent crop in the region (Chart 3.46) was mango planted on about 2,354 ha (22% of the area under permanent crops) followed by banana (13%) and orange (11%). However, a relatively large proportion of the planted area (43%) was under ‘other’ crops which were not specified.

The total harvested quantity was 439,918 kilograms of which the single largest contributor was sugarcane (chewing type) with 359,601 kg (81.7% of the total harvested quantity), with mango

contributing 22,277 kg (5.1%). Banana contributed a small proportion (0.9%) and the remaining 12.3% of the harvested quantity was attributed to other unspecified permanent crops.

Productivity of the planted permanent crops was equally highly variable with sugarcane producing 50.8 t/ha compared to mango (0.7 t/ha) and banana (0.2 t/ha).

The most important district for permanent crop production in the region was Manyoni district. The district had the largest area planted with permanent crops (6,535 ha) accounting for 60.3% of the total area under permanent crops in the region, (Chart 3.47). In the other districts, the area under permanent crops was about 17.4% of the planted area in Iramba district and 14.8% in Singida Rural district. The percentage of the total area planted with permanent crops was the smallest in Singida Urban with only 809 hectares equivalent to 7.5% of the area planted with permanent crops, (Chart 3.47).

A total of 7,758 households planted one or more perennial crops with Singida Rural district having the largest number of households growing perennial crops (2,592 households, 33.4%) followed by Manyoni (2,367 households, 30.5%). The proportion of households which grew perennial crops in Iramba district (23.2%) was almost twice as many as in Singida Urban district which had the smallest proportion of the households (12.9%).

The average planted area per household was highly variable between districts and was largest in Manyoni (2.8 ha/hh), intermediate in Iramba (1.05 ha/hh) and Singida urban (0.81 ha/hh) and smallest in Singida rural (0.62 ha/hh), (Chart 3.47).

3.4.1 Mango

Mango was planted on a total of 2,354 hectares (0.43 % of the total permanent crops planted area) of which, 1,181 hectares (50.2% of the total area planted with mango in the region) were in Iramba district (Map 3.19 and Chart 3.48). Manyoni district was the second most important district for mango production, with a planted area of 855 hectares (36.3%). Singida Urban and Singida Rural districts each accounted for small planted areas of 7.9% and 5.6%, respectively.

Mango growing households were located predominantly in Manyoni district (1,029 household, 34.7%) with relatively fewer growing households in Iramba (30.3%), Singida Rural (21.9%) and Singida Urban (13.1%). The planted area per household was highly variable (Chart 3.48 and map 3.20).from the largest in Iramba district (1.3 ha/household) to the smallest in Singida rural district (0.2 ha/household).

3.4.2 Banana

Banana was planted on a total of 1,450 hectares (0.27 % of the total permanent crops planted area) in the region and the major production area was Manyoni district with 911 hectares (62.8% of the total area planted with banana in the region), (Chart 3.49 and Map 3.21). Singida Rural district was second largest with a planted area of 306 hectares (21.1%), followed by Iramba district (306 ha, 21.1%). Singida Urban had the smallest planted area with banana (11 ha, 0.75%).

Banana growing households were located predominantly in Singida Rural district (1,296 household, 55.6%) with relatively fewer growing households in Manyoni (26.5%), Iramba (15.5%), and Singida Rural (2.4%).

The planted area per household was highly variable from the largest in Manyoni district (1.48 ha/household) to the smallest in Singida Rural district (0.2 ha/household) which was comparable to Singida Urban district (0.24 ha). The banana planted area per household in Iramba district was intermediate at 0.62 hectares per household, (Map 3.22).

3.5 Use of Implements, Inputs and Access to Crop Production Services

3.5.1 Use of Agricultural Implements

The types of agricultural equipment used for different farm operations were mostly operated by hand and or relied on simple mechanized technologies.

The hand hoe was used by the largest proportion of the households in the region (43%), followed by the sword (39%), ox-plough (14%). Other equipment used by much fewer households were;

the ox-planter, hand sprayer, and equipment associated with extraction of oil from oilseeds (e.g, grater, oil press, chipper, etc), Chart 3.50).

3.5.1.1 Use of Animal-drawn and Mechanized Agricultural Equipment

The animals used most frequently to provide power were the cow and the donkey used mostly in Iramba followed by Singida Rural district. In Manyoni and Singida Urban districts, the cow was used by less than 5,000 households. The use of power tillers and ox-ridger was somehow insignificant.

Equipment drawn by animals such as donkeys and oxen or cow and simple mechanized equipment such as the power tiller were also used by relatively few agricultural households across all the districts, (Chart 3.51).

3.5.2 Inputs Use

Access to inputs in this section refers to all crop growing households in the region growing both annual and perennial crops. A small number of households used inputs and this is true particularly

the inputs that are not produced on farm for example: improved seeds, fungicides, inorganic fertilizers and herbicides.

3.5.2.1 Use of Fertilizer

Both organic and inorganic fertilizers were applied in the region. The total planted area applied with fertilizers was 61,247 hectares (11.2% of the total planted area in the region) implying that the major portion of the planted area did not receive any type of fertilizers (Map 3.23). However, of the two types of fertilizers, organic fertilizers were applied on a much larger planted area (54,586 ha, 89% of the total area applied with fertilizers) compared to inorganic fertilizers. (Chart 3.52a)

The largest area planted with fertilizers was in Singida Rural district (26,566 ha, 43% of the total planted area applied with fertilizers in the region) followed by Iramba (19,692 ha, 33%) and Manyoni (7,677 ha, 13%). Singida Urban district had the smallest planted area applied with fertilizers (6,692 ha, 11%), (Chart 3.52b).

On the other hand, Manyoni district had the largest planted area applied with inorganic fertilizers (6,019 ha, 90.4%) while Iramba had a relatively smaller area planted with inorganic fertilizers (619 ha, 9.3%) and Singida Urban (23 ha, 0.3%). Inorganic fertilizers were not applied in Singida Rural district.

3.5.2.2 Use of Improved Seeds

The planted area with improved seeds was 51,368 ha which represented 11% of the total area planted with annual crops and vegetables (Chart 3.53).

The largest area planted with improved seeds was in Iramba district with 25,965 hectares followed by Singida Rural (12,413 ha) and Manyoni (12,156 ha). Singida Urban district had the smallest area planted with improved seeds (834 ha), (Chart 3.54).

3.5.2.3 Use of Pesticides

Pesticides, comprising of insecticides, fungicides and herbicides were applied on a total 9,702 hectares, equivalent to 2.1percent of the total planted area in the region, implying a very low level of pesticides use in the region.

Insecticides were the most dominant pesticide used in the region with 6,868 hectares equivalent to 71 % of the planted area applied with pesticides followed by fungicides (1,975ha, 20%). Herbicides were the least used (859 ha, 9%), (Chart 3.55).

The planted area applied with insecticides was the largest in Iramba (3,221 ha, 47% of the total area applied with insecticides in the region), followed by Singida Rural (2,602 ha, 38%) and Manyoni (823 ha, 12%). Insecticides were least used in Singida Urban (222 ha, 3%). The largest planted area applied with fungicides was in Manyoni (791ha, 40% of the total area applied with fungicides) followed by Singida Rural (525 ha, 27%) and Iramba (455 ha, 23%). Singida Urban district had the smallest area applied with fungicide, (204 ha, 10%).

Herbicides were applied in only three districts. Manyoni was the leading district in the region in the use of herbicide (500 ha, 58%), followed by Singida Rural (350 ha, 41%) and Iramba district with only 9 hectares equivalent to 1 percent of the total area plated with herbicides. However, herbicides were not used in Singida Urban, (Chart 3.56).

3.6 Irrigation

3.6.1 Area Planted With Irrigation

The planted area applied with irrigation in the region (Chart 3.57 and map 3.24) was 8,401 hectares (1.5% of the total planted area in the region). Singida Rural district had the largest planted area applied with irrigation (5,160 ha, 61% of the total irrigated area in the region) followed by Manyoni with 1,506 hectares (18%), Iramba (1,074 ha, 13%) and Singida Urban (662 ha, 8%).

However, in each of the districts, the area planted with irrigation represented very small proportion of the total planted area in the district comparatively; the district with the largest proportion of the planted area was Singida Urban (3.2%), followed closely by Singida Rural (3.1%) and Manyoni (1.5%). Iramba district had the smallest proportion of the planted area under irrigation (1%).

3.6.2 Sources of Water for Irrigation

The total number of households that applied irrigation in the region was 8,384 (8.3% of the crops-only households). The main sources of irrigation water were tap water (3,712 household, 44%) followed by the river (2,291 household, 27%) and canals (1,856 household, 22%), (Chart 3.59).

Dams were only used in Manyoni by 309 households (4%) and wells were only used in Singida Rural district by 216 households (3%). Bore holes and lakes were not used as sources of irrigation water in the region.

3.6.3 Methods of Obtaining Irrigation Water

The majority of the households that practises irrigation obtained water by gravity (5,177 households, 61.7%) followed by hand bucket (2,833 households, 33.8%) and a few households used hand pump (375 households, 4.5%), (Chart 3.60).

The proportion of households that depended on gravity to access irrigation water was the highest in Manyoni (73.5% of the households which obtained water by gravity) followed by Iramba (24.3%) and Singida Urban (2.1%). Hand buckets were used predominantly in Manyoni (40% of the households that used hand buckets), followed by Iramba (25.4%), Singida Rural (22.9%) and Singida Urban (11.8%). The

extent on the use of the hand pump was 69.6% in Singida Rural, 27.5% in Manyoni and 14.9% in Singida Urban. The hand pump was not used in Iramba district.

3.7 Crop Storage and Marketing

3.7.1 Crop Storage

Crop storage means keeping a crop for a certain period of time as either food for household, in order to sell at high prices later on or as seed for planting in the following season. The census results for Singida region show that, crop storage was practiced by 99% of agricultural households in the region, (Chart 3.61). The largest proportion of households (41%) stored crops in locally made structures.

The proportion of households using this method was highest in Iramba, Manyoni and Singida Urban districts, (Chart 3.62). The second most common method of crop storage was the use of sacks or open drums practiced by about 38% of the households. This method was most common in Singida Rural and was second most common method in Iramba, Manyoni and Singida Urban districts.

The use of other methods such as improved locally made structures, storing in an unprotected pile and airtight drums were practiced but were almost insignificant.

However, about 19 % of the households reported not to have stored crops. In this category, Singida Rural had the largest number of households, followed by Iramba, Manyoni and Singida Urban, in that order, (Chart 3.63).

3.7.2 Crop Marketing

The number of households that reported to have sold crops was 148,886 which represent 69 % of the total number of crop growing households in the region. The sale of crops was conducted in all the districts in varying proportions (Map 3.25). The largest proportion of the households participating in sale of crops was in Manyoni (77%) followed by Iramba (72%), and Singida Rural (66%). Singida Urban district had the lowest proportion of the households which sold crops in the region, (Chart 3.64 and Map 3.25).

3.7.2.1 Marketing Problems

Variable challenges were expressed by the households that participated in the sale of crops. The single most challenging problem cited by the largest proportion of the households (70%) was the low price in the open market, (Chart 3.65). Other marketing problems cited by relatively low proportions of the households were; crop market being too far (6%), lack of transport (3%), transport cost too high (3%), lack of market information (2%) and government regulation (2%). Other marketing problems were cited by very few households comprising less than 1%. However, about 12 % of the households indicated not to have any marketing problems.

3.8 Access to Crop Extension Services

The number of agricultural households that received crop extension services was 142,800 or 66 % of the total crop growing households in the region (Chart 3.66). There were large variations between districts, in the number of agricultural households that received extension services.

Extension services were provided most extensively in Iramba district reaching up to 95 % of the targeted households, followed by Singida Urban district (70%) and Manyoni (62%). However, Singida Rural district had the lowest percentage of households that received crop extension services (43%), (Chart 3.67 and Map 3.26). When the region was considered as a unit, extension services were provided to an average of 66 % of the total rural agricultural households.

3.8.1 Source of Crop Extension Messages

Of the total households that received extension advices, the government provided. The greatest proportion (132,619 households, 93%), followed by neighbours (26,953 households, 19%), Radio/Television (11,178 households, 8%), NGO/Dev projects (9,133 households, 6%), large scale farmers (3,343 households, 2%) and cooperatives (9,133 households, 1%), Chart 3.68).

3.9 Agricultural Credits

The census results show that, the region had very few agricultural households (3,275 households, 1.5%) that accessed credits, out of which (2,345 households, 72%) were male-headed households and (930 households, 28%) were female-headed households. In Iramba, Singida Rural and Manyoni districts, only male-headed households accessed agricultural credits. Moreover, there was no household which received agricultural credit in Singida Urban district, (Table 3.7).

Table 3.7 Number of Agricultural Households that Received Credits by Sex of Household Heads and District

District	Male		Female		Total
	Number	%	Number	%	Number
Iramba	360	50	360	50	719
Singida Rural	648	100	0	0	648
Manyoni	1,338	72	514	28	1,852
Singida Urban	0	0	56	100	56
Total	2,345	72	930	28	3,275

3.9.1 Credit Sources

The major agricultural credit providers in the region were family, friends or relatives which provided credits to about 900 agricultural households (40% of the total number of households that accessed agricultural credits), followed by savings and credit SCCOS (24%), Cooperatives (23%) and NGO/Projects (8%). The banks provided the lowest proportion of agricultural credits to the households (5%), (Chart 3.69)

Access to agricultural credit was reported in all the districts except Singida Urban, (Chart 3.70). Family, friends and relatives and NGO/Projects were the only sources of credit in Iramba district, whereas savings and credits SACCOS was the major source of agricultural credits in Singida Rural district. In Manyoni district, households

accessed credit through four credit providers namely; family, friends and relatives, savings and credit SACCOS, banks and cooperatives, (Chart 3.70).

3.10 Soil Erosion Control and Water Harvesting Structures

3.10.1 Soil Erosion Control

Erosion control and water harvesting facilities are grouped together because they normally have dual purposes of reducing erosion and increasing the amount of water available for crop production. The number of agricultural households that had soil erosion control and water harvesting facilities on their farms was 41,612 households which representing 19 % of the number of agricultural households in the region, (Chart 3.71).

The proportion of households with soil erosion control and water harvesting facilities was the highest in Singida Rural with (16,416 households, 19% of the total agricultural households in the district) followed by Iramba (8,990 households, 12%), Singida Urban (1,223 households, 8%) and Manyoni (1,955 households, 5%), (Chart 3.72).

3.10.2 Erosion Control/Water Harvesting Structures

The most commonly used structures) for erosion control and water harvesting were erosion control bunds (108,018 structures, 55.3% of total number of structures constructed) followed by terraces (49,077 structures, 25.1%). Other minor soil erosion/water harvesting structures were constructed water harvesting bunds (4.5%), vetiver grass bands (4.3%), tree belts (3.8%), gabions/sandbags (3.7%) and drainage ditches (2.4%), (Chart 3.73).

3.11 Livestock Results

This section presents results on livestock comprising of domesticated animals for the purpose of providing milk, meat, hides/skins and other products. The livestock types in the region included the following stock: cattle, goats, sheep, pigs and a small stock of chicken.

3.11.1 Cattle Population

A total of 1,588,837 herds of cattle were recorded in all the districts. Manyoni district had the largest cattle population (767,273, 48.3%) in the region followed by Singida Rural (400,510, 25.5%) and Iramba (356,005, 22.4%). Singida Urban had the lowest cattle population (65,049, 4.1%), (Chart 3.74 and Map 3.28).

A total of 172,522 households were engaged in livestock production in the region of which 75,177 (43.5 %) were located in Singida Rural, 62,930 (36.5%) were in Iramba, 22,739 (13.2%) were in Manyoni and 11,676 (6.8%) were located in Singida Urban district.

3.11.1.1 Cattle Distribution by Type

The largest proportion (99.7%) of the total cattle population in the region was the indigenous type. There were a small number of improved beef cattle populations of 1,115 distributed between Iramba (899, 80.6%) and Singida Rural (216, 19.4%). The number of improved dairy cattle was 3,409 cows equivalent to only 0.21 % of the total cattle population in the region.

The improved dairy cattle were in all the districts and most of them were located in Manyoni district (2,469, 72.4%). Other districts had the following population shares; Singida Rural (648, 19%), Iramba (180, 5.3%) and Singida Urban (111 3.3%), (Chart 3.75).

3.11.1.2 Cattle Population Trend

The census results have indicated a general downward trend in the cattle population by 23.1 % between 1995 and 2003 and 18.1 % between 1999 and 2003. For the period between 2003 and 2008, cattle population has increased by 20.9 % (from 1,257,159 in 2003 to 1,588,837 herds in 2008), (Chart 3.76).

3.11.1.3 Improved Cattle Trend

The improved cattle population in the region was 4,524 (1,115 improved beef and 3,409 improved dairy) has been fluctuating over the years. Between 1995 and 2003, the improved cattle population increased by 159.6% (from 1,662 in 1995 to 4,314 herds in 1999), and then declined to 2,040 herds or by 52.6 % in 2003. However, the population started to increase again to 4,524 or by 61.8 % in 2008, (Chart 3.77).

3.11.2 Goat Production

The total goat (including dairy goats) population in the region was 839,169 distributed in all the districts, (Map 3.29 and Chart 3.78). The goat population included the improved goats for meat 206 (0.02%) and the dairy goats 3,705 (0.4%). The largest population was in Singida Rural (312,804 goats 37.3%), followed by Iramba (249,923 goats, 29.8%) and Manyoni (212,783 goats, 25.4%). Singida Urban had the lowest goat population (63,659 goats, 7.6%).

A total of 82,428 households raised goats; most of which 37,156, (45%) were concentrated in Singida Rural followed by Iramba 31,105 (38%), Manyoni 7,717(9%) and Singida Urban with the

least number of households (6,449, 8%). However, the goat density was the highest in Singida Urban with 2,103 goats per sq. km and the lowest in Manyoni district with 1,096 goats per sq. km.

3.11.2.1 Improved Dairy Goat Production

There were 3,705 dairy goats in the region most of which were in Singida Urban district (2,224 60%) followed by, Singida Rural (864, 23%) and Manyoni (63,559, 17%. There were no improved dairy goats in Iramba district, (Chart 3.79).

3.11.2.2 Goat Population Trend

The goat population increased by a small margin between 1995 when there were 978,772 goats as compared to 1999 when the number was 1,052,716 goats, an increase of only 7.5 %. Taking into account that the number of goats in 2003 was 684,420 and that of 2008 was 839,169, this gives a decrease of 35 % for the period 1999 to 2003 and an increase of 22.2 % between 2003 and 2008, (Chart 3.80).

3.11.3 Sheep Production

Sheep were reared mainly in Iramba, Manyoni and Singida Rural districts, (Chart 3.81). Iramba district had the largest sheep population (165,596, 35 %) followed by Manyoni (162,982, 34 %) and Singida Rural (127,455, 27%). The lowest sheep population was in Singida Urban (21,739, 4.6%). Most of the sheep raised in the region were of the indigenous type. The sheep density varied between 597 sheep per sq. km to 841 sheep per sq. km, (Map 3.30).

3.11.3.1 Sheep Population Trend

The sheep population trend was as follows: 1995 (246,263), 1999 (85,679), 2003 (164,209) and 2008 (477,772). Therefore, there has been a decline of about 65% for the period 1995 to 1999, an increase of about 92% for the period 1999 to 2003 and a substantial increase of 191 % between 2003 and 2008, (Chart 3.82). The trend from 1999 to 2008 indicates the increasing importance of sheep among the livestock raised in the region.

3.11.4 Pig Production

Pigs were reared in all the districts except Singida Urban. The total pig population was 48,935 most of which were in Iramba district (42,073, 86%) followed by Singida Rural (3,672, 7%) and Manyoni (3,190, 7%). However, Singida Urban district did not raise pigs, (Chart 3.83 and Map 3.38). The highest pig density was in Iramba district with 205 pigs per sq. Km.

3.11.4.1 Pig Population Trend

The pig population for the period 1995 – 2008 was characterised by large fluctuations from one period to another. However, the largest increase in the pig population was recorded during the period 2003 to 2008, when the population increased from 6,375 in 2003 to 48,935 in 2008, (Chart 3.84).

3.11.5 Chicken Production

The chicken population in the region was 1,615,779 with, Singida Rural district having the largest number (717,202, 44.4%) followed by Iramba (539,761, 33.4%), Manyoni (257,850, 16%) and Singida Urban (100,966, 6.2%), (Chart 3.85 and Map 3.32). The chicken population was predominantly of the indigenous type.

A total of 157,146 households were involved in chicken production of which 71,720 households or 45.6% were in Singida Rural, 55,738 (35.5%) households were in Iramba, 18,624 (11.9%) households were in Manyoni and 11,064 (7%) households were in Singida Urban district. However, chicken density was the highest in Singida Rural with 3,360 chicken per sq. km and the lowest in Manyoni district with 1,331 chicken per sq. km.

3.11.5.1 Improved Chicken

The region had a total of 17,438 improved chickens (layers and broilers), equivalent to 1.1 % of the total chicken population. The number of layers was 9,676 (55.5%) and that of broilers was 7,762 or 44.5 % of the total improved chicken, (Chart 3.75). Manyoni district had the largest number of both broilers (7,203, 62.3%) and layers (4,836, 74.4%). Singida Rural district had the second largest number of both broilers (2,592, 33.4%) and layers (1,296, 13.4%) of the respective improved chicken types in the region. However, the contribution of Singida Urban and Iramba districts to the total improved chicken population was either small or negligible, (Chart 3.86).

The total number households involved in keeping broilers was about 900 with Singida Rural having 432 households, Manyoni 412 household and Singida Urban 56 households. There were no households which kept broilers in Iramba district. The total number of households involved in keeping layers was 816 with Manyoni having 309 households, Singida Rural 216 households, Iramba 180 households and Singida Urban 111 households, (Chart 3.86).

3.11.5.2 Chicken Population Trend

The chicken population trend in Singida region has remained relatively stable over the period 1999 to 2008 reflecting relatively minor changes but with a population above one million during the four census periods, (Chart 3.87). A significant increase in the total chicken population was recorded between 1999 and 2003 when the chicken population

increased from 1,247,668 in 1999 to 1,658,178 in 2003, an increase of 33 % which was the highest chicken population recorded in the region during the period 1995 to 2008, (Chart 3.87).

3.12 Livestock Diseases Pests Control

3.12.1 Incidences of Tick and Tsetse Flies

All the districts reported to have problem of tick-borne diseases and tsetse fly infestation. A total of 80,048 households or 43% of the total livestock keeping households reported tick borne problem and 26,161 (14%) households reported tsetse fly problem, (Chart 3.88 and Map 3.33).

District wise, tick problems were reported by 54% of the livestock keeping households in Singida Rural, 48% in Singida Urban, 42% in Iramba and 18% in Manyoni district. Incidences of tsetse fly infestation were relatively less prevalent compared to tick-related problems. The highest recorded average of 16% was in Singida Rural and the lowest frequency of 8% was in Singida Urban district.

3.12.2 Livestock Deworming

Deworming of cattle, goats, sheep and pigs was reported in all the districts at varying proportions. The number of livestock rearing households that dewormed their livestock was 71,523 (39% of the total livestock rearing households in the region).

The percentage of the households that dewormed their cattle was 82% in Singida Rural, 70% in Iramba, 75% in Singida Urban and 63% in Manyoni. Those which dewormed their goats/sheep were; Singida Urban (67%), Manyoni (63%), Singida Rural (61%) and Iramba (41%). The percentage of the households that dewormed pigs was 11% in Iramba, 4% in Manyoni, 3% in Singida Rural. However, de-worming of pigs was not practiced in Singida Urban district. Relatively, cattle were dewormed by the largest proportion of the households in all the districts followed by goats and sheep. Pigs were hardly dewormed, (Chart 3.89).

3.13 Poverty Indicators

The analysis provided in this report relates to poverty indicators for agricultural households as captured in 2007/08 using proxies to help assist the process of tracking poverty levels throughout the country. This is part of implementation of MKUKUTA, a Poverty Reduction Strategy, and Tanzania Mainland.

3.13.1 Toilet Facilities

The majority of the agricultural households in Singida region used the traditional pit latrine (204,860, 94.4% of the sampled households) with a limited use of other types of toilet facilities. The improved pit latrine was used by 1.3 % of the households while the flush toilet was used by only 0.6 % of the households. The proportion of households that did not have toilet facilities at all was 3.6%, (Chart 3.90 and Map 3.34)

3.13.2 Household Assets

Most of the rural agricultural households (61.5%) owned radios followed by bicycles (48%), mobile phones (24.1%), iron (20.8%), wheelbarrows (7%), vehicles (5.6%), television/videos (1.9%), motorcycles (1.6%), landline phones (1.1%) and refrigerators (0.6%), Chart 3.91

3.13.3 Access to Drinking Water

The main source of drinking water for the rural agricultural households was the unprotected well/spring (35%), followed by piped water (16.6%), protected well (16.1%) and surface water (such as dams or lakes) (18.6%). Very few households had access to drinking water from other sources, (Chart 3.92).

The distance to the main source of drinking water varied but for the majority (48%) of the households, the distance was between one and two kilometres followed by 500m up to a kilometre (28%). Very few households sourced their drinking water from a distance less than one kilometre or more than three kilometres, (Chart 3.93).

3.13.4 Sources of Energy for Lighting

Wick lamp was the most common source of energy for lighting used by 80.1% of the households in the region followed by hurricane lamp (11.6%), firewood (3.8%) and pressure lamp (2.5%). Other sources were of minor importance, (Chart 3.94).

3.13.5 Sources of Energy for Cooking

The most common source of energy for cooking was firewood used by 92.3% of the rural agricultural households in the region. The second common source was crop residues (4.6%) followed by charcoal (2.5%). Other sources were minor. (Chart 3.95)

3.13.6 Roofing Material

Grass roofing was used in all the districts, by between 1.5% and 7.6% of the total households in the region (Chart 3.96). Singida Urban district had the lowest proportion of houses roofed with grasses or leaves (2.0%). The highest proportion (10.1%) of the households roofed with grass or leaves was in Manyoni district.

3.14 Food Consumption Pattern

3.14.1 Number of Meals per Day

On average, the majority (62%) of the households in the region took two meals per day and 36 % of the households took an average of three meals per day. A relatively small proportion (2%) survived on one meal per day, (Chart 3.97). The number of households that took one meal per day was the smallest in all the districts but there were some variations between districts on other meal frequencies. District wise, the number of meals taken by the majority of the households was three per day in Iramba district and two per day in other districts, (Chart 3.98 and Map 3.36).

3.14.2 Meat and Fish Consumption Frequency

The frequency of consumption of meat and fish was almost similar in all the districts. Relatively, a large number of households (about 90,000) did not eat meat or fish at all. Those which consumed meat or fish once a week were about 60,000 households, (Chart 3.99). However, the proportion of households that ate meat once a week was the same as that of the households that ate fish once a week in the respective districts. The percentages ranged between 17.4% in Manyoni to 32.4% in Iramba district, (Maps 3.37 and 3.38).

3.15 Food Security

The status of household food sufficiency at different times of the agricultural year is used in this report, as a proxy for food security status. The percentage of households that reported to have never experience food satisfaction was 43%, followed by those who reported to seldom experience food satisfaction (31%), and those who always experience the problem of satisfying food (10%). The percentage of those who often or sometimes have the problem of food satisfaction was 9 and 7 respectively, (Chart 3.100).

3.16 Sources of Cash Income

The main source of cash income for most of the rural households in the region was the sale of food crops (52.8%) followed by sale of cash crops (16.6%), other casual cash earnings (10%), sale of cash crops (16.6%), other casual cash earnings (9.6%), sale of livestock (6.2%), business income (5%), sale of livestock products (3.4%), cash remittance (2.2%). Wages and salaries category had only 1.5 % of the rural households. Other sources were minor, (Chart 3.101).

4 DISTRICT PROFILES

The following district profiles highlight the characteristics of each district and compare them in relation to population, main crops and livestock, production and productivity, access to services and resources and levels of poverty.

4.1 Iramba

Iramba district had the second largest number of agricultural households (72,819) in the region and had the third highest density of agricultural households in the region. About 61.2% of the households in the district (44,591) were engaged in mixed crop and livestock farming as the main activity though most of them (53%) consider crop farming as the main activity. The female population was more prevalent in the younger age bracket of 26-39 while the male population was more prevalent in the older age brackets of 50-54, and 75-84 years. The average literacy rate in the district was 73.5% and had the lowest proportion of the population in the region (42%) of persons aged 5 years or older, that completed school.

The district had the second largest usable land area (204,223 ha, 31.9% of the 639,999 total usable land in the region). The district had the second largest usable land area per household (2.4 ha/household). Iramba district had a planted area of 192,521 ha (35.4% of the total 544,565 ha planted area in the region) with a land utilization rate of 94%, which was the highest in the region.

All annual crops are planted during the long rainy season. Iramba is a major maize production district in the region with 38.8% of the total area planted with maize and has the largest proportion of households (38.6%) growing the crop in the region. The district is also the second most important area for bulrush millet production and the third in paddy production.

Iramba district had the largest area, in the region, planted with sunflower (52,793 ha, 53.1%) and the second most important district for groundnut production. In other crops, the district had the second largest area planted with beans (2,155 ha, 33.6%) and had the highest yields averaging at 2 t/ha. For other pulses, Iramba had the second largest proportion of area planted with chick peas in the region (45.3%) and bambaranuts were planted to a much lesser extent compared to other districts.

Iramba was the leading district in the area planted with sweet potato (37.5% of the planted area), with sweet potato productivity (3.0 t/ha), and had the largest production (41.3%) of the total harvested sweet potatoes. In the case of fruits and vegetables, Iramba had the second largest

planted area per household (0.4 ha), after Singida Rural, and tomato was the major vegetable crop which accounted for 48.2% of the total area planted with tomatoes in the district.

For other annual crops, Iramba district was the major producer of cotton, out of the two districts producing the crop in the region, with 75.4% of the planted area, 57.6% of the households growing the crop and 85.8% of the total harvested seed cotton.

Iramba district accounted for 23.2% of the households that planted permanent crops in the region, with an average planted area per household of 0.81 ha. The district accounted for the largest area planted with mango (50.2%) and was the third in the area planted with banana (21.1%).

The district was leading in the use of animal-drawn equipment using both castrated and uncast rated bulls. The district was also a leading in the use of ox-carts using donkeys. Iramba district had the second largest planted area (19,692 ha, 36.1%) applied with organic fertilizers in the region but had the smallest proportion of the planted area (0.52%) under irrigated farming, Tap water was the main source of irrigation, and other sources were rivers and canals.

The district practiced crop storage and majority of the households used locally made structures sacks or open drums. About 62% of the agricultural households sold crops to generate cash and the major challenge faced by 70% of the households was the low price in the open market. Family, friends and relatives were the only sources of credit in the district.

About 95% of the households, received extension services, the highest level in the region. The district had the largest area planted with improved seeds (49.8% of the total area planted) in the region.

Iramba district had the largest planted area applied with insecticides (46.9%) and the third largest planted area applied with fungicides (23.0%). However, herbicides were hardly applied in this district

About 8,990 households (12.3% of the households with water harvesting structures in the region) were in Iramba district, there were no households with planted trees in the district.

The district had the third largest cattle population (356,005, 22.4%) after Manyoni and Singinda Rural. Cattle density was the lowest in the region. Most of the cattle in the district were of the indigenous type for milk and beef. Iramba district had the largest number of sheep (165,596, 34.7%) and pig population (86%) in the region. The district also had the second largest proportion of goats (29.8%) and chicken (33.4%) in the region. However, broiler chickens were not kept in the district.

With regard to livestock diseases, Iramba district was the third in tick-related incidences reported by 42% of the cattle owning households and second in tsetse related problems reported by 15% of the livestock keeping households. The district had the highest level of deworming chicken (11%); was third highest in the region in deworming cattle (70%) and at the lowest level for goats and sheep (47%).

The majority of agricultural households in the district used the traditional pit latrines and only about 0.25% of the households had no toilets, unprotected wells were the major sources of drinking water (35.2%) followed by piped water (20.8%). Roofing of houses is mostly corrugated iron sheets with only about 1.73% using grasses or leaves for roofing. The majority of the households (60.5%) took three meals per day and the district had the highest proportion of the households eating meat or fish at least once a week (32.4%) compared to all other districts. Iramba was the most food secured district having the lowest proportion of households (51%) which reported food insufficiency.

4.2 Manyoni

Manyoni district had the third largest number of agricultural households (41,671) and the least density of agricultural households in the region (211 households/sq. km). Manyoni was the only district in the region with livestock-only households (617) as well as pastoralist households (206). About 28% of the households in the district were engaged in mixed crop and livestock farming as the main activity though most of them (72%) had crop farming as the main activity. The female population was more prevalent in the younger age bracket of 26-39 while the male population was more prevalent in the older age brackets of 50-54, and 75-84 years.

Manyoni district had the lowest literacy level (71%) and the lowest proportion of the population attending school (29%) but had the largest proportion of households (11.5%) able to read and write in both Kiswahili and English and the highest literacy rate (21%) for female heads of household

Manyoni had the third largest usable land in the region (192,870 ha, 30.1%) and accounted for 25.6% of the total planted area (544,565 ha) in the region. The district had the largest usable land area available to households (3.7 ha/household) and maintained a land utilization rate of about 72%, the lowest in the region.

All annual crops were planted during the long rainy season. The land area planted per household was (2.4 ha/household), second to Iramba district. Manyoni was the third most important district for maize production (41,472 ha, 27.6%) with 31,485 households (21.9%) involved in maize production and the third most important area for bulrush millet production. In paddy production, Manyoni was the second most important district (3,292 ha, 25.2%), after Singida Rural, but the production of bulrush millet was on a limited scale representing about 9.9% of the total area planted with bulrush millet in the region.

For oil seed and oil nut crops, sunflower was planted on about 8% of the total planted area in the district with an average planted area of one hectare per household. However, productivity of sunflower in the district (0.52 t/ha) was the lowest in the region. On the other hand, the district had the largest proportion of district land planted with groundnuts 6.5% in the region and accounted for the largest area planted with groundnuts (9,105 ha, 58.6%) of the total area planted with groundnut, in the region.

Manyoni district had the largest area planted with beans (92,910 ha), equivalent to 45.3% of the total area planted with beans but growing households planted small areas (0.42 ha/hh), the smallest in the region. Manyoni district also had the largest area planted with chick peas (51.3% of the total area planted with chick peas) and the largest planted area per household (3.71 ha/hh).

Manyoni district had the largest proportion (84.4%) of the total area planted with cassava by 11.6% of the growing households in the region. The district had 35.9% of the total area planted with sweet potato.

The district did not make much contribution in the planting and production of fruit and vegetable crops. For other annual crops, Manyoni was the major producing district accounting for 96.7% of the area planted with tobacco and 90.7% of the growing households in the region.

Manyoni was the most important district for permanent crops production in the region by having the largest area planted with permanent crops (6,535 ha, 60.3% of total area under permanent crops in the region). It was the second most important district for mango production in the region (36.3% of total planted area) and had the largest planted area under banana (62.8%) and largest planted area per household (1.48 ha/hh).

On draft animal power, agricultural households in the district used mostly the cow but at a relatively low level as the households that used this type of animal were less than 5,000. The use of other animal-drawn equipment or other means of mechanization was insignificant.

Manyoni district had the smallest planted area applied with organic fertilizers (1,658 ha, 3.0%) and the largest planted area applied with inorganic fertilizers (6,019 ha, 90.4%).

Irrigation farming was insignificant as only 0.78% of the planted area in the district was irrigated and dams were used only in this district by 4% of the households who irrigated. Water was obtained predominantly by gravity (73.5%).

Crop storage was practiced by the majority using locally made structures and many others used sacks or open drums. Agricultural households sold crops to generate cash and Manyoni district had the largest proportion of households participating in this activity (79%). The major challenge was the low price in the open market. Family, friends and relatives were the only sources of credit in the district.

About 60.5% of the agricultural households in Manyoni district received extension services and the district had the second largest area planted with improved seeds (12.4%) in the region, after Iramba district.

The district was leading in the application of herbicides (58.2% of the total area applied) and fungicides (40.1%) and was the third, after Iramba and Singida Rural, in the application of insecticides with 12% of the planted area treated with insecticides.

Water harvesting structures (soil bunds) were constructed by very few households (4.7% of households with water harvesting structures in the region) and general soil erosion control included tree planting though the number of households involved in the district was the lowest, equivalent to

0.4%. Manyoni district had the largest cattle population (767,273, 48.3% of the total cattle population in the region) kept by relatively fewer households (9% of total households with cattle) making the district the one with the highest cattle density in the region 93,691 herds/sq. km Most of the cattle were predominantly of the indigenous type. Pig production was almost insignificant.

The district had 25.4% of the goat population in the region, including 16.7% of the improved dairy goats, and the second largest sheep population (34.1% of the regional total) and chicken (16%), most of which were indigenous. For the improved chicken, Manyoni district had the largest proportion of both broiler (62.3%) and layer chicken (74.4%) in the region.

With regard to livestock diseases, Manyoni district was the least affected by tick-related incidences (reported by 18% cattle owning households) and was the third in tsetse related problems reported by only 10% of livestock keeping households. The extent of de-worming was highest comparable for cattle, goats and sheep, both at 63%.

The majority of agricultural households in the district used the traditional pit latrine but the district had the largest proportion of households without toilets (18.1%). Unprotected wells were the major source of drinking water (35.2%) followed by piped water (20.8%). Manyoni district had the highest proportion (10.1%) of households roofed with grass or leaves.

The majority of the households (52.6%) took two meals per day but the district had the lowest (17.4%). Manyoni district was the most food insecure district in the region having the highest proportion of households (68%) which reported food insufficiency.

4.3 Singida Rural

The district had the largest number of agricultural households (87,490) in the region of which the majority (51,414 households, 58.8%) were engaged in mixed crop and livestock production. The majority of the populations (97%) in the district considered crop farming as the main activity.

The average literacy rate in the district was 80%, the second highest in the region with rates of male heads of households generally higher (83 years) compared to that of their female counterparts (56 years). An average of 43% of persons 5 years or older had completed school, 38% were attending while 19% had never attended school.

The district had the largest usable land (212,811 ha, 33.3% of the total available usable land in the region). The total planted area in the district was the second largest in the region (139,162 ha, 65.4% of the usable land in the district) while the land area available per household (2 ha/household) was the third largest after Manyoni and Iramba districts.

All annual crops were planted during the long rainy season. The planted land area per household in Singida Rural was 1.9 hectares. Singida Rural had the second largest area (48,407 ha, 32.2%) planted with maize which involved 53,358 households (37.1% of the crop growing households in the region) and the second most important district for sorghum production (38,859 ha, 40% of the planted area).

Singida Rural was the district with the largest area planted with bulrush millet (23,743 ha, 48.6% of the total crop planted area) though the planted area per growing household was the smallest in the region (0.7 hectare per household). The district was also the most important district for paddy production having the largest planted area in the region (8,396 ha, 64.3%) with the largest planted area per household (1.9 ha/household). Finger millet was predominantly grown in this district with 5,308 ha (77.7% of the total 6,830 hectares planted) and by the largest number of growing households (6,913 households, 76.2%).

Singida Rural had the second largest area planted with sunflower (32,019 ha, 32%). However, despite the district having the smallest planted area per growing household (0.9 ha/hh), yields were one of the highest in the region at 0.7 t/ha which was similar to Iramba district. In groundnut production the planted area in the district (2,723 ha) accounted for about 17.7% of the total area planted with groundnuts in the region and 14.7% of the groundnut growing households. The district had the largest groundnut planted area per household (0.6 ha/hh) but yields were similar to other districts in the region at, an average of 0.6 t/ha

For pulse crops, the district had the second largest area planted with beans (1,356 ha, 21.1%) with intermediate yields averaging 1.4 t/ha. Chick peas were the only other pulse crop which was also planted on much smaller areas.

The cassava planted area in Singida Rural accounted for 5.3% of the total 3,216 hectares planted in the region involving 1,782 households (36.4%). However, the district produced 717 tons of cassava roots equivalents to 51.3% of the total of 1,399 tons harvested in the region. Singida Rural

was third in sweet potato production with 20.9% of the planted area (750 ha) representing a mere 0.4% of the total planted area in the district. Sweet potato productivity was at an average 2.8 t/ha. In vegetable crops, Singida Rural district was the largest onion producing district in the region with 1,224 hectares (78.3% of the total area planted with onion in the region) and had the largest harvest (1,841 tons) of onions. The onion planted was 0.52 ha/household. Onion yields were the lowest (1.5 t/ha) in the region but the district contributed 66.7% of the total 1,840.5 tons harvested onions. The district was also the single most important area for okra production. The okra planted area in the district 1,312 ha was equivalent to 98.7% of the total area planted with okra in the region and had the largest planted area per household (3.04 ha/hh).

The area planted with permanent crops in Singida Rural district accounted for about 14.8% of the total 10,830 ha under permanent crops in the region. However, the district had the largest number of households growing perennial crops (2,592 households, 33.4%) with the smallest planted area per households (0.62 ha/hh). The permanent crops grown were mango (21.9% of the 2,354 ha planted in the region) and banana (21.1% of the 1,450 ha planted in the region.)

The farm animals used to operate animal-drawn equipment in the district were mostly cows and donkeys. On the use of inputs, the district had the largest planted area applied with fertilizers (26,566 ha, 43% of the total planted area applied with fertilizers in the region) and the largest planted area applied with irrigation (5,160 ha, 61% of the total irrigated area in the region) but this represented only 3.1% of the total planted area in the district. All the water used for irrigation was drawn from wells drawn mostly using hand pumps (69.6% of total households that used this technology in the region). Improved seeds were used on 25.8% of the planted area in the district

Agricultural households in Singida Rural district practiced crop storage and the majority used sacks or open drums. However, Singida Rural had the largest number of households, among the 19 % of the households in the region that reported not to have stored crops. About 66% of the agricultural households sold crops to generate cash, but the major challenge, reported by about 70% of the households in the region, was the low price in the open market.

Only male headed households received credit in the district and savings and credits SACCOS were the major sources of credit in the district

Singida Rural district had the lowest percentage of households that received crop extension services (43%). The district had the second largest planted area applied with insecticides ((2,602 ha, 38%) and fungicides (525 ha, 27%) and herbicides (350 ha, 41%).

The district was leading in the proportion of households with soil erosion control and water harvesting facilities (16,416 households, 19% of the total agricultural households in the district) which were predominantly water erosion control bunds and terraces.

The district had the second largest cattle population (400,510 herds, 25.5%), after Manyoni, involving 36.5% of the total agricultural households in the district. Most of the cattle in the district were the indigenous dual purpose type for milk and beef but the district also had a small proportion of improved dairy animals (648 cows, 19%).

Singida Urban district had the largest goat population (312,804, 37.3%) involving the largest proportion of households keeping goats (37,156 households, 45%). Improved goats constituted a small proportion of the goat population in the district (864, 23%). Sheep population in the district was (127, 455, or 27%) of the total population in the region and a small population of pigs (3,672, 7%).

The district had the largest chicken population in the region (717,202, 44.4%) involving 55,738 households (35.5% of households in the district). Singida Rural district had the second largest number of both broilers (2,592, 33.4%) and layers (1,296, 13.4%) of the respective improved chicken types in the region. The district also had 432 households out of the 900 that kept broiler chicken in the region. As with the other districts, fish farming was not practiced.

Both tsetse infestation and tick borne diseases were highest in this district. Tick borne diseases were reported by 54% of the livestock keeping households while incidences of tsetse fly infestation were reported by an average of 16% of the livestock keeping households.

The district had the highest level of de-worming cattle (82% of households with cattle) in , the third in de-worming of goats and sheep (61%) and pigs (3%), though the latter depicted the practice as being uncommon. The majority of agricultural households in the district, as is the case for the entire region, used the traditional pit latrine and the major sources of drinking water were unprotected wells/springs.

Grass or leaves roofing was used by the majority (54%) of the households in the district with another 38% using corrugated iron sheets. The main source of energy was the wick lamp and the majority owned radios.

District wise, the majority (70%) of the households took two meals per day and majority of the households ate meat or fish once a week and food insufficiency in the district was reported by about 56% of the households.

4.4 Singida Urban

The district had the smallest number of agricultural households (15,011hh, 10%) in the region of which the majority (8,173 households, 54.4%) were engaged in mixed crop and livestock production. There were neither pastoralist nor livestock only households and the majority of the households (93%) considered crop farming as the main occupation.

Literacy was at an average of 82% which was the highest in the region. The literacy rate for male heads of household was the highest in the region at 88%. The district had the highest population aged 5 years or older that completed school (46%); the lowest in the category of never attended school (15%) and the highest in the population that was attending school (40%).

Singida Urban had the smallest usable land area available (30,096 ha, 4.7%) with a usable land area per household averaging less than 2 hectares per household the smallest among all the districts. The total planted area in the region was 544,565 ha of which 25,960 ha (4.8%), the smallest in the region, the district also had the smallest planted area per household (1.4 ha/hh).

The main rainy season was the main crop production season. The district had the smallest planted area with maize (2,095 ha, 1.4%) and the smallest planted area per household (0.6 ha/hh). Singida Urban also had the smallest planted area with sorghum (4,617 ha, 4.7%); the third largest planted area with bulrush millet (9,353 ha, 19.1%) and had the smallest land area planted with paddy (111 household, 1%) at an average 0.9 ha per household.

Singida Urban had the smallest area planted with sunflower (3,161 ha, 3%) and the smallest number of growing households (3,225hh, 3.6%). However, the planted area per growing household was the second largest, after Iramba, at 0.98 ha/household. The district accounted for about 2.7% of

the total 68,297 tons of sunflower harvested in the region groundnuts were not planted in the district.

Cassava was planted on a total of 3,216 hectares in the region most of which was planted in Manyoni district (2,729 ha, 84.4% of the total area planted with cassava) followed by Singida Urban (6.5%), The cassava planted area in Singida Urban district was the second largest in the region, it accounted for 6.5% of the total 3,216 hectares planted in the region and the growing households constituted 21.8% of cassava growers in the region.

The district had the smallest area planted with sweet potatoes (208 ha, 5.8% of the planted area in the region); had the smallest number of growing households (723 hh, 7.4%) and the smallest planted area per household (0.3 ha/hh). However, sweet potato productivity was the highest in this district (3.3 t/ha).

For vegetable crops, Singida Urban district was the second least important in onion production with a planted area equivalent to 7.6% of the total 1,564 ha planted with onion in the region with an average 0.35 ha planted area per household. Singida Urban was the only other district where okra was planted on the remaining 1.3% of the planted area (17 ha) of the total 1,329 hectares planted in the region. However, despite the small planted area, okra yields was the highest in this district (2.3 t/ha).

Singida Urban district was one of the two districts (together with Iramba district) that planted tomatoes on 58 hectares (51.8% of the planted area). However, proportionally, Singida Urban district allocated more land for tomato production (0.22%) as compared to the other tomato producing district. Out of the 749 tomato growers in the region, 52 % were in Singida Urban district with an average of 0.15 ha per household. Tomato yield was at an average 23 t/ha and the 1,337 tons produced in the district accounted for 51.5 % of the total tomato harvested in the region.

Planted area under permanent crops was the smallest in Singida Urban with 809 hectares (7.5% of the area planted with permanent crops in the region). Singida Urban had the smallest proportion of the households (12.9%) with an intermediate planted area per growing household (0.81 ha/hh).

The major permanent crops grown were mango (7.9% of the total planted area) with 13.1% of the mango growing households. Banana was a minor crop planted on just about 11 ha.

The use of farm animals, mostly the cow, in the district was reported by less than 5,000 households while the use of power tillers and ox-ridger was almost insignificant. Singida Urban district had the smallest planted area applied with fertilizers (6,692 ha, 11% of the total planted area applied with fertilizers in the region) and the smallest area applied with inorganic fertilizers (23 ha, 0.3% of the area applied).

The irrigated planted area was 662 ha (8% of the planted area with irrigation) and hand buckets were used 11.8% while the hand pump was used by 14.9% of the households which applied irrigation. Agricultural households in Singida Urban district practiced crop storage and the majority used sacks or open drums.

Singida Urban district had the lowest proportion (less than 10%) of the households which sold crops in the region and the major challenge, reported by about 70% of the households in the region, was the low price in the open market.

None of the households in the district received agricultural credit during the census year. About 70% of the agricultural households in the district received crop extension services mostly through government agents, neighbours and radio/television.

Singida Urban district had the smallest area planted with improved seeds (3.7%), the least use of insecticides (222 ha, 3% of the total area applied with insecticides in the region), had the smallest area applied with fungicide (204 ha, 10%) and did not apply herbicides.

The proportion of households with soil erosion control and water harvesting facilities in the district was 8% (1,223 households) and the structures used were mostly water erosion control bunds and terraces.

The district had the lowest cattle population (65,049, 4.1%), mostly indigenous, which accounted for about 3.3% of the improved dairy cattle in the region. The district had the lowest goat population (63,659, 7.6%) but with the highest goat density (2,103 goats per sq. km). A total of 6,449 households (8%) were involved in raising goats.

Sheep population was the lowest in this district (21,739 sheep 4.6%) as opposed to improved goats, which were predominantly located in the district (2,224 improved dairy goats, 60%). Pigs were not kept in Singida Urban district.

The district had the smallest chicken population in the region (100,966 chicken, 6.2%), involving 11,064 (7% of chicken rearing households in the district) but the engagement of the district raising improved chicken population was almost negligible.

Both tsetse infestation and tick borne diseases were prevalent in this district. Tick problems were reported by 48% of the households with livestock in Singida Urban district while another 8% reported incidences of tsetse fly infestation. The district was third in de-worming cattle (75% of the households which reported problems) and was the leading district in the de-worming of goats and sheep (67%).

The majority of agricultural households in the district, as is the case for the entire region, used the traditional pit latrine and major sources of drinking water were the unprotected wells/springs. Singida Urban district had the lowest proportion of houses roofed with dry grasses or leaves (1.5%) and about 10% of the houses were roofed with iron sheets. The main source of energy was the wick lamp and the majority owned radios.

District wise, the majority of the households took two meals per day and majority of the households ate meat or fish once a week. The district was the second, after Manyoni, most affected by food insufficiency as reported by about 67% of the households.

APPENDICES

APPENDIX I : TABULATION LIST	124
APPENDIX II: TABLES.....	135
APPENDIX III: QUESTIONNAIRE	220

APPENDIX I : TABULATION LIST

TYPE OF AGRICULTURE HOUSEHOLD	135
2.2.1 Number of Households by type of Household and District during 2007/08 Agriculture year	135
2.1.2 Number of Agriculture Households by type of Holding by District during 2007/08 Agriculture year	135
HOUSEHOLDS DEMOGRAPHICS.....	136
3 1 Number of Household Members classified by District and Sex for the 2007/08 Agricultural Year	137
3.2 Number of Agricultural Household Members By Sex and Age Group for 2007/08 Agricultural Year (Row %)	137
3.3 Number of Agricultural Household Members By Sex and Age Group for 2007/08 Agricultural Year (Column %)	138
3.4 Number of Heads of Agricultural Households by Marital Status, sex of head and District, 2007/08 Agricultural Year	138
3.5 Number of Heads of Agricultural Households by Survival of Female Parent, sex of head and District, 2007/08 Agricultural Year.....	139
3.6 Number of Heads of Agricultural Households by Survival of Male Parent, sex of head and District, 2007/08 Agricultural Year.....	139
3 .7 Number of Household Members Who Can Read and Write languages by type of language and District, Agricultural Year.....	140
3.8 Number of Heads of Agricultural Households by Main Activity and District , 2007/08 Agricultural Year	140
3.9 Number of Household Members by Education Status and District, 2007/08 Agricultural.....	140
3.10 Number of Heads of Agricultural Households by Education Status, sex of head and District, 2007/08 Agricultural Year	141
3.11 Number of Heads of Agricultural Households by Education Status, sex of head and District, 2007/08 Agricultural Year	141

3.12	Number of Agricultural Household Members By Level of Formal Education Completion and District, 2007/08 Agricultural Year	141
3.13	Literacy Level of Household Members by District.....	142
3.14	Number of Agricultural Household Members By Level of involvement in Farming Activity and District, 2007/08 Agricultural Year	143
3.15	Number of Agricultural Household Members By Main Activity and District, 2007/08 Agricultural Year	143
LAND ACCESS/ OWNERSHIP		144
4.1	Number of Agriculture Households by Type of Land Use and District for the 2007/08 agriculture year	145
4.2	Area of Land (ha) by land use and District for the 2007/08 agriculture year.....	145
4.3	Area of land (ha) by Ownership/Tenure and District for the 2007/08 agriculture year	146
LAND USE		147
4.4	Area of land (ha) by Ownership/Tenure and District for the 2007/08 agriculture year	148
4.5	Number of Agriculture Households by Type of Land Use and District for the 2007/08 agriculture year	148
4.6	Area of Land (ha) by land use and District for the 2007/08 agriculture year.....	148
4.7	Number of Agriculture Households by Whether All Land Available to the Household Was Used during 2007/08 agriculture year and District	149
4.8	Number of Agriculture Households By Whether Female Members of the Household Own or Have Customary Right to Land By District during 2007/08 Agriculture year	149
INPUT USE BY DISTRICT		150
5.1	Total Number of Agriculture Households and Planted Area by Irrigation Use and Region for the 2007/08 agriculture	151
5.2	Total Number of Agriculture Households and Planted Area by Herbicide Use and Region for the 2007/08 agriculture year	151
5.3	Total Number of Agriculture Households and Planted Area by Fungicide Use and District for the 2007/08 agriculture	151
TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION BY DISTRICT		152

5.4	Number of Agriculture Households, Area Planted (ha) and Quantity of Sorghum Harvested (tonnes) Agricultural Year 2007/08.....	153
5.5	Number of Agriculture Households, Area Planted (ha) and Quantity of Maize Harvested (tonnes) Agricultural Year 2007/08.....	153
5.6	Number of Agriculture Households, Area Planted (ha) and Quantity of Paddy Harvested (tonnes) Agricultural Year 2007/08.....	153
5.7	Number of Agriculture Households, Area Planted (ha) and Quantity of Bulrush Millet Harvested (tonnes) Agricultural Year 2007/08.....	153
5.8	Number of Agriculture Households, Area Planted (ha) and Quantity of Cowpeas Harvested (tonnes) Agricultural Year 2007/08.....	154
5.9	Number of Agriculture Households, Area Planted (ha) and Quantity of Finger Millet Harvested (tonnes) Agricultural Year 2007/08.....	154
5.10	Number of Agriculture Households, Area Planted (ha) and Quantity of Cassava Harvested (tonnes) Agricultural Year 2007/08.....	154
5.11	Number of Agriculture Households, Area Planted (ha) and Quantity of Cassava Harvested (tonnes) Agricultural Year 2007/08.....	154
5.12	Number of Agriculture Households, Area Planted (ha) and Quantity of Beans Harvested (tonnes) Agricultural Year 2007/08.....	155
5.13	Number of Agriculture Households, Area Planted (ha) and Quantity of Green Gram Harvested (tonnes) Agricultural Year 2007/08.....	155
5.14	Number of Agriculture Households, Area Planted (ha) and Quantity of Bambaranuts Harvested (tonnes) Agricultural Year 2007/08.....	155
5.15	Number of Agriculture Households, Area Planted (ha) and Quantity of Chick Peas Harvested (tonnes) Agricultural Year 2007/08.....	155
5.16	Number of Agriculture Households, Area Planted (ha) and Quantity of Sunflower Harvested (tonnes) Agricultural Year 2007/08.....	156
5.17	Number of Agriculture Households, Area Planted (ha) and Quantity of Groundnuts Harvested (tonnes) Agricultural Year 2007/08.....	156
5.18	Number of Agriculture Households, Area Planted (ha) and Quantity of Simsim Harvested (tonnes) Agricultural Year 2007/08.....	156

5.19	Number of Agriculture Households, Area Planted (ha) and Quantity of Tumeric Harvested (tonnes) Agricultural Year 2007/08.....	156
5.20	Number of Agriculture Households, Area Planted (ha) and Quantity of Bitter Aubergine Harvested (tonnes) Agricultural Year 2007/08.....	157
5.21	Number of Agriculture Households, Area Planted (ha) and Quantity of Onion Harvested (tonnes) Agricultural Year 2007/08.....	157
5.22	Number of Agriculture Households, Area Planted (ha) and Quantity of Tumeric Harvested (tonnes) Agricultural Year 2007/08.....	157
5.23	Number of Agriculture Households, Area Planted (ha) and Quantity of Tomatoes Harvested (tonnes) Agricultural Year 2007/08.....	157
5.24	Number of Agriculture Households, Area Planted (ha) and Quantity of Cabbage Harvested (tonnes) Agricultural Year 2007/08.....	158
5.25	Number of Agriculture Households, Area Planted (ha) and Quantity of Chillies Harvested (tonnes) Agricultural Year 2007/08.....	158
5.26	Number of Agriculture Households, Area Planted (ha) and Quantity of Spinach Harvested (tonnes) Agricultural Year 2007/08.....	158
5.27	Number of Agriculture Households, Area Planted (ha) and Quantity of Cotton Harvested (tonnes) Agricultural Year 2007/08.....	158
5.28	Number of Agriculture Households, Area Planted (ha) and Quantity of Tobacco Harvested (tonnes) Agricultural Year 2007/08.....	158
	PERMANENT CROPS	159
5.29	Production of Permanent Crops By Crop Type and District.....	160
5.30	Production of Permanent Crops By Crop Type – SINGIDA	160
	INPUT USE BY CROP	161
5.31	Planted Area & Number of Crop growing Households by Fungicide Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON.....	162
5.32	Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON (MASIKA)	163
5.33	Planted Area & Number of Crop Growing Households by Herbicide use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON (MASIKA)	164

5.34	Planted Area & Number of Crop Growing Households by Irrigation Use and Crop for the 2007/08 agriculture year - LONG SEASON	165
5.35	Planted Area & Number of Crop Growing Households by Improved seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON.....	166
5.36	Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON.....	167
5.37	Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON	168
5.38	Planted Area & Number of Crop Growing Households by Inorganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON	169
MARKETING.....		170
5.39	Number of Households Reporting Marketing Problems for agricultural products by Crop , LONG RAINY SEASON- IRAMBA.....	171
5.42	Number of Households Reporting Marketing Problems for agricultural products by Crop, LONG RAINY SEASON- MANYONI	172
ACCESS TO EQUIPMENTS.....		173
6.1	Number of Agriculture Households that used Agricultural Equipment/Asset by type and District for 2007/08 agriculture year.....	174
6.2	Number of Agricultural Equipment/Asset owned by type and District for 2007/08 agriculture year	175
6.3	Number of Agricultural Households that Used Tractors/Draft animals to cultivate Land By Type and District for 2007/08 agriculture year	176
6.4	Number of Tractors/Draft animals Owned by Type and District for 2007/08 agriculture year	176
IRRIGATION		177
6.5	Number of Agriculture Households reporting use of Irrigation during 2007/08 agricultural Year by District	178
6.6	Number of Agriculture Households using irrigation by Source of Irrigation Water by District during the 2007/08 agricultural Year.....	178

6.7	Number of Agriculture Households by method of used to obtain water and District during 2007/08 agriculture year.....	178
SOIL EROSION CONTROL		179
6.8	Number of Households with Soil Erosion Problem on their Land By District	180
6.9	Number of Households with Erosion Control/Water Harvesting Facilities on their Land By District	180
6.10	Number of Erosion Control/Water Harvesting Structures by Type and District as of 2007/08agriculture year	180
AGRICULTURAL CREDIT		181
7.1	Number of Agriculture Households receiving Credit by District During the 2007/08 Agriculture Year	182
7.2	Number of Households receiving Credits by Main Source of credit and District During the 2007/08 Agriculture Year.....	182
7.3	Number of Households Reporting the Main reasons for Not Using Credit by District During the 2007/08 Agriculture Year.....	183
7.4	Number of Households receiving Credits by Main Source of credit B and District During the 2007/08 Agriculture Year.....	184
7.5	Number of Households receiving Credits by Main Source of credit C and District During the 2007/08 Agriculture Year.....	184
7.6	Provision of credit A by sex and District During the 2007/08 Agriculture Year	184
7.7	Provision of credit A by sex and District During the 2007/08 Agriculture Year	185
7.8	Provision of credit B by sex and District During the 2007/08 Agriculture Year	185
7.9	Provision of credit C by sex and District During the 2007/08 Agriculture Year	185
CROP EXTENSION		186
8.1	Number of Agriculture Households that received Crop Advice During the 2007/08 Agriculture Year	187
8.2	Number of Agriculture Households Participated in Out Grower Agreement During the 2007/08 Agriculture Year	187

8.3	Number of Agriculture Households Participated in Contract Production Agreement During the 2007/08	187
8.4	Number of Agriculture Households Participated in Contract Production Agreement During the 2007/08 Agricultural Year.....	187
8.5	Number of Agriculture Households By Source of Extension Messages By District During the 2007/08 Agriculture Year.....	188
8.6	Number of households receiving extension advice on Spacing by District during the 2007/08 agriculture year	188
8.7	Number of households receiving extension advice on Use of Agrochemicals by Source and District during the 2007/08 agriculture year.....	189
8.8	Number of households receiving extension advice on Erosion Control by Source and District during the 2007/08 agriculture year.....	189
8.9	Number of households receiving extension advice on Organic Fertilizer use by Source and District during the 2007/08 agriculture year.....	190
8.10	Number of households receiving extension advice on use of Inorganic Fertilizer by District during the 2007/08 agriculture year.....	190
8.11	Number of households receiving extension advice on Use of Improved Seeds by Source and District during the 2007/08 agriculture year.....	191
8.12	Number of households receiving extension advice on Mechanization and Labor Saving Technologies by Source and District during the 2007/08 Agriculture year	191
8.13	Number of households receiving extension advice on Irrigation Technologies by Source and District during the 2007/08 agriculture year.....	192
8.14	Number of households receiving extension advice on Crop Storage by Source and District during the 2007/08 agriculture year.....	192
8.16	Number of households receiving extension advice on Vermin Control by Source and District during the 2007/08 agriculture year.....	193
8.17	Number of households receiving extension Other advice Control by Source and District during the 2007/08 agriculture year.....	193
	CATTLE PRODUCTION.....	194
9.1	Number of Cattle by Type and District as of 1st October 2008	195

9.2	Number of Households Rearing Cattle, Herd of Cattle and Average Number of Cattle per Household by Herd size on 1st October 2008.....	195
9.3	Total Number of Cattle by Cattle Types and Category, on 1st October 2008.....	195
9.4	Total Number of indigenous Cattle by Category of cattle and District as 1 st October,2008	196
9.5	Total Number Households rearing Cattle and Method of Cattle Identification by District as of 1st October, 2008	196
9.6	Number of Milked Cow by Category of Cattle, Season type and District during 2007/08 Agriculture Year	196
GOAT PRODUCTION		197
9.7	Number of Goats by Type and District as of 1st October 2008	198
9.8	Number of Households rearing Goat, Head of Goat and Average Head per Household by Herd size on 1st. October, 2008	198
9.9	Total Number of Goat by Type as of 1st. October, 2008	198
9.10	Number of Milked Goat by Category of Goat, Season type on 1st. October, 2008	199
9.11	Number of Milked Goat by Category of Goat, Season type and District, as of 1st October,2008	199
SHEEP PRODUCTION.....		200
9.12	Number of Sheep by Type and District as of 1st October 2008.....	201
9.13	Total Number of Indigenous Sheep by Category of Sheep and District as of 1st October 2007/08 Agriculture year	201
9.14	Number of Households rearing Sheep, Head of Sheep and Average Head per Household by Herd size as of 1st. October, 2008.....	201
PIG PRODUCTION.....		202
9.15	Number of Households Raising Pigs by District on 1st. October, 2008	203
9.16	Number of Households Rearing Pigs, Head of Pigs and Average Head per Household by Herd Size as of 1st October 2008.....	203
9.17	Total Number of Pigs by Type of Pigs and District as of 1st October 2008	203
9.18	Number of Pigs per Household by District as of 1st October 2008	203

CHICKEN AND OTHER LIVESTOCK PRODUCTION.....	204
9.19 Number of Chicken by Type and District as of 1st October 2008	205
9.20 Number of Households Keeping Chickens and Average Number of Chickens per Household by Flock Size as of 1st October 2008.....	205
9.21 Number of Other Livestock by Type of livestock and District as of 1st October 2008	205
9.22 Total Number of Other Livestock by Type as of 1st October 2008	205
PESTS AND PARASITES CONTROL.....	206
9.23 Number of Livestock Rearing households De-worming Livestock by District during 2007/08 Agriculture Year	207
9.24 Number of Livestock Rearing households that De-wormed Livestock by type of livestock and District, 2007/08 Agricultural Year.....	207
9.25 Number of Livestock Rearing Households Normally Encountering Tick Problems by District during 2007/08 Agriculture Year.....	207
9.26 Number of Livestock Rearing Households by Method of Tick Control and District during 2007/08 Agriculture Year.....	207
9.27 Number of Livestock Rearing Households normally Encountering Tsetse Flies Problems by District during 2007/08 Agriculture Year	208
9.28 Number of Livestock Rearing Households by Method of Tsetse Flies Control and District during 2007/08 Agriculture Year.....	208
9.29 Number of Livestock Rearing Households normally Encountering Newcastle Disease Problems by District during 2007/08 Agriculture Year	208
9.30 Number of Livestock Rearing Households by Method of Newcastle Disease Control and District during 2007/08 Agriculture Year	208
9.31 Number of Livestock Rearing Households normally Encountering Fowl Typhoid Disease Problems by District during 2007/08 Agriculture Year	209
9.32 Number of Livestock Rearing Households by Method of Newcastle Disease Control and District during 2007/08 Agriculture Year.....	209
9.33 Number of Livestock Rearing Households normally Encountering Foot and Mouth Disease Problems by District during 2007/08 Agriculture Year	209

9.34	Number of Livestock Rearing Households normally Encountering Lymphskin Disease Problems by District during 2007/08 Agriculture Year	209
LIVESTOCK EXTENSION		210
9.35	Number of households receiving extension advice by District during the 2007/08 agriculture year	211
9.36	Number of Households receiving Livestock advice (overall) By Source of Extension and District during the 2007/08 agriculture year	211
9.37	Number of households receiving extension advice on Livestock Feeds processing by District during the 2007/08 agriculture year	211
BEE KEEPING		212
9.38	Number of Agricultural Households involved in Honey Production/Collection and District, 2007/08 Agricultural Year	213
9.39	Number of Bee hives by Type, Size of Bees and District during the 2007/08 Agriculture Year	213
9.40	Quantity of Honey Harvested and Sold by Size of Bees and District during the 2007/08 Agriculture Year	213
9.41	Average price of Honey (Tshs/litre) by Size of Bees and District during the 2007/08 Agriculture Year	213
9.42	Number of Agriculture Households by Location of Selling Honey and District during the 2007/08 Agriculture Year	214
HOUSEHOLD FACILITIES		215
10.1	Number of households reporting average number of rooms and type of Roofing Materials and District, 2007/08 Agricultural Year	216
10.2	Number of households reporting average number of rooms and type of Floor Materials and District, 2007/08 Agricultural Year	216
10.3	Number of households by type of Wall Materials and District, 2007/08 Agricultural Year	216
10.4	Number of Agricultural Households reporting ownership of Assets by District, 2007/08 Agricultural Year	216

10.5	Number of Agricultural Households Reporting Main Source of Energy for Lighting by District, 2007/08 Agricultural Year	217
10.6	Number of Agricultural Households Reporting Main Source of Energy for Cooking by District, 2007/08 Agricultural Year	217
10.7	Number of Agricultural Households Reporting Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year	217
10.8	Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year	217
10.9	Number of Agricultural Households Reporting Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	218
10.10	Number of Agricultural Households Reporting Distance to Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	218
10.11	Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	218
10.12	Number of Agricultural Households Reporting Number of days the household Consumed Meat during the Preceding Week by District, 2007/08 Agricultural Year	218
10.13	Number of Agricultural Households Reporting type of TOILET the household normally use by District, 2007/08 Agricultural Year	219
10.14	Number of Agricultural Households Reporting the status of food satisfaction of the household during the Preceding Year by District, 2007/08 Agricultural Year	219
10.15	Number of Agricultural Households Reporting Main Source of Income by District, 2007/08 Agricultural Year	219

APPENDIX II: TABLES

TYPE OF AGRICULTURE HOUSEHOLD

2.2.1 Number of Households by type of Household and District during 2007/08 Agriculture year

District	Rural Households involved in Agriculture	% of Total Rural Households	Rural households NOT involved in Agriculture	% of Total Rural Households	Total Rural Households	% of Total Households	Number of Urban Households	% of Total Households	Total Number of Households
Iramba	72,819	99.5	334	0.5	73,153	87.1	10,838	12.90	83,991

Definition and working page for page 1

General Definitions

Who is a Smallholder /Small Scale farmer?

Should have one or more of the following: in the 2007/08 farming season had one or more cultivated and planted farms. The farm land may either be owned, rented, borrowed. The farmer may also be raising 1 and 50 head of cattle, and/or between 5 and 100 head of sheep/Goats/Pigs, and/or between 50 and 1000

Household: A group of people who occupy the whole of part one or more housing units and makes joint provision for food and/or other household items. Usually such a group comprises a husband, wife, and their children. Other relatives may be members of the household if they happen to live and get food provisions from the same household. People who live together and eat from the same pot may be considered as members of the same household even if they stay in separate dwellings. An individual who lives and eat alone is considered as an independent household.

Household Head: A person who is acknowledged by all other members of the household either by virtue of his age or standing in the household as the head. He/she should be a permanent resident of the house and he/she is the main person responsible for decision making regarding use of household resources..

Agricultural Holding: This is an economic unit of agricultural production under single management. This unit may have been grown various crops. For the purpose of the survey, the agricultural holdings are restricted to those which meet one of the following conditions:

- Having or operated at least 25 sq meter of arable land
- Own or keep at least one head of cattle or five goats/sheep/five pigs or fifty chicken/ducks/turkeys during the agricultural year 2007/08 (from October 2007 to September 2008).

Question Specific Definitions:

Type of Agriculture holding Codes (Q2.1):

Crops only: A holding is referred to be a crop only holding if it has cultivated at least one piece of land. This also applies to all households owning or have kept livestock whose number does not qualify such households to be an agricultural holding (No cattle, less than 5 goats/sheep/pigs, less than 50 chickens/turkeys/rabbits).

Livestock only: A holding is referred to be a livestock only holding if it has exercised livestock husbandry only during the 2007/08 agricultural year.

NOTE

For agricultural holding only and pastoralist holding only, the number of livestock should be at least one head of cattle, not less than five goats/sheep/pigs, not less than 50 chickens /turkeys /rabbits. This also applies to households having or operated less than 25 sq meter of cultivated land (which does not qualify the household to be considered as agricultural holding) but has the number of livestock that makes the holding qualifies to be considered as livestock holding.

Pastoralist holding: This refers to a household which practices livestock production as its major income generating activity and a means of subsistence, but moves from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they have no permanent place of residence.

Both crops and livestock: A holding is referred to be a both crops and livestock if it has cultivated a piece of land equal or exceeding 25 sq meter and if such households have own or kept livestock whose number qualify such household be considered as an agricultural holding.

Procedures for questions:

Q.2.1 Type of agriculture household/holding

Using the options under the question classify the type of agriculture household/holding

Note: If the household had an acre of crops and raised 40 chickens during 2007/08, it is classified as 'Crops only' as the number of chickens does not qualify the household as a livestock holding.

Definition and working page for page 2

Question Specific Definitions:

Relation to head (Col 2):

Household Head: A person who is acknowledged by all other members of the household either by virtue of their age or standing as the household head.

Read and Write (Col 8)

Any other language: Must be a written language.

For someone who can read and write in Kiswahili and any other language apart from English, the correct code is 1. For one who can read and write in English and any other language apart from Kiswahili the the correct code is 2. Code 4 should only be used for any other language which is not English or Kiswahili.

Education Level Reached (Col 10):

Ask the respondent the highest educational level reached. This aims at establishing whether at the time of enumeration the member of the household is studying has completed or has never studied. Make further enquiry for the level of education reached for those who have completed studies. Establish if the member had attained any training after graduation for the purposes for completing column number 9. For those who still continue attending studies during the period of this survey, establish their learning stage. For instance for a household member who studied up to Standard Three but did not complete his/her education at this level, then his/her highest education level reached is Standard Two. For those indicated under code 3 (not studied) in column 8 should be marked code 99 (Not applicable) in column 9.

Section 3.0 Note

Make sure that you define the hh proper to ensure that all the members of the hh are included. Ensure that you stress that the hh is not just the hh heads direct family and that it includes other people living and eating together with the family.

If you notice that the hh is large or you see many people around the hh and you have been given a smaller number of the hh members, make further enquiries until you are sure that you have captured all the hh members.

Section 3.0 Household information.

- ii) For each household member complete columns 1,2,3 and 3
After completing columns 1, 2, 3 and 3 for each household member, go back to the first household member and complete the remaining columns for that member.
- iii) Repeat step 2 for the rest of the household members.

Off-farm Income (Col 13)

These are income made from activities NOT on the HH's farming activities. This can be from formal employment (e.g. in government etc.), temporary jobs, casual labourers and income generation activity and includes working for cash on other people's farms. Indicate whether each member was involved in an off farm income generating activity during 2007/08

Definitions and working page for page 3

Definitions for Key Specific Questions

Section 4.1 – Land Access/Ownership

These are areas that were used by the households for the 2007/08 farming season

Lease/Certificate of Ownership: Area under lease/certificate of ownership refers to the areas which were issued by the government. The household possesses government issued leasehold title or certificate of ownership. The land will normally be officially surveyed and boundaries marked. This includes leased land bought from others where the lease/certificate of ownership has been transferred.

Customary Law: This refers to the land which the household does not have an official government but its right of use is granted by the traditional leaders.

Bought: This refers to the areas of customary land that has been bought from others. This land does not have an official title and therefore is not leasehold.

Rented from others: Land rented from others for cash or for a fixed amount in crop produce (e.g. fixed number of bags at harvest).

Borrowed: use granted by land owner free of charge. Land owner can either be a lease holder or has right of access through customary law.

Share cropping: where the household is permitted to use land which is then paid for from a percentage of the harvested crop

Section 4.2 Land Use

Temporary crops: are sown and harvested during the same agricultural year

Permanent crops: are crops once sown or planted last for some years and need not to be replanted after each annual harvest.

Permanent crops /mixed crops: This is a mixture of permanent and seasonal crops. The two crops can either be randomly planted together or in a particular pattern e; for example intercropping (1 row of maize and 1 row of beans). A field that has been divided into plots for different crops is not mixed).

This is further subdivided into:

Mixture of Permanent crops – two or more permanent crops grown together

Mixture of Permanent and Temporary crops – permanent crop and annual crop together

Mixture of Temporary crops– two or more temporary, annual crops grown together

Pasture land: this is an area of owned/allocated land which is set aside for livestock grazing. It can be improved pasture where the farmer has planted grass, applied fertilized or where other means have been applied to improve the pasture. Or it can be natural pasture.

Natural Bush: Land which has naturally grown shrubs and trees and is considered productive but is not utilized for farming or livestock production.

Overview to section 4

Overview to section 4

Section 4.0: Preliminary note

Land Access/Ownership

Land access/ownership refers to the area utilized by the members of the household. This does not include communal land where the resources are shared between household members. It does not include official communal land that the household has sole access to for example a plot for crop farming in the communal area.

Procedures for questions

Section 4.0 – Land Ownership

1. Ask the respondent if he knows the total areas of land the household has sole access to. If he knows make a note in the calculation space
2. Ask the respondent the area of the different land ownership categories the household has sole access to (Q4.1, 1 to 4.1.7) and record in the appropriate spaces.
3. Add up the area of the different categories of land and compare it with the total area obtained in step 1 (if the respondent provided the information)
4. If the total area is different find out which one is correct and make

Section 4.2: Land Use

1. Ask the respondent the area of the different land use categories the household has sole access to (Q4.2.1 to 4.2.12) and record in the appropriate spaces.
2. Add up the area of the different categories of land and compare it with the total area obtained in section 4.0. The total area should be the same.
3. If the total area is different find out which one is correct and make amendments where appropriate.

4.0 LAND ACCESS/OWNERSHIP/TENURE				Identification <input type="text"/>			
4.1 LAND ACCESS/OWNERSHIP/TENURE				Give details on Area owned by the household during 2007/08 agricultural season.

Instructions for calculating the area of mixed crops in a mixture
A. If the mixed crop is mixed annual ly only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions.
B. If the mixed crop is mixed permanent and annual try to work tyhe percent age taken by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.
C: Number of trees method to calculate annual crop areas in a permanent-annual crop mix:
 (i) List each of the permanent crop in column b and enter the ground area per acre for each permanent crop (from instrctions for page 8) in colum d.
 (ii) Enter the number of permanent trees in the mix in column e as will be provided to you by the respondent
 (iii) Calculate the area occpied by each crop by multiplying column d and collumn e and sum up these to obatin the total area of permanent crops in the mix.
 iv) To obatin the area for temporary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.
 (v) Proceed to step 1 to calculate the area under each temporary crop.
1. Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.
2. Using the percentage for each crop, calculate the are for each crop from the remaining area under temporary crop.
3. After completing the excrisc for all the fields, sum the area of each crop in tyhe mix plus any monocrops and uenter the totals in section 5.1.1 Collumn 3.
4. Once the quantity harvested is obtained , cakculate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box. If there is significantly difference, check the area and the amount harvested..

5.0		PERMANENT AND TEMPORARY CROP PRODUCTION													Identificatioon			<input type="text"/>	
5.1		ANNUAL CROPS AND VEGATBLE PRODUCTION-SHORT RAINY SEASON																<input type="text"/>	
		Did your household palnted any crop duding short rainy season for 2007/08 agricultural year? Yes = 1, No = 2,(If the answer is yes proceed to Section 5.3)																<input type="text"/>	
5.1.1		Provide the following details for each crop planted during the short rainy season for 2007/08 agricultural year																	
Name of Crop	Crop code	Planting Actual area plnated (acre)	Main crop owner: Enetr the number of the hh member from page 2 on informati on for hh members	Use of Seeds					Irriga ted area	Pembejeo Use of fertilisers (If 6 is the answer in col 11 proceed to col 16)				Use of chemicals agaist weeds (If 6 is the answer in col 11 proceed to col 20)				Cost

Definitions and working page for page 5

Storage (Col. 30, Q 5.1.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

Marketing Challenges Q 5.1.1 Col. 33:

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for reulatina transportation and selling of crops.

Inputs (Q 5.1.1)

- Farm Yard Manure:** An organics fertliser made on farm from animal dung. .
- Compost:** An organic fertliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

Questions specific definitions

Q 5.1.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

Crops storage is keeping/reserving crops in a container or a special place for future use.

Q 5.1.1 Col 31

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

Working area/calculation space

Definitions and working page for page 6

Planted Area: Area in acre the household was able to plant

Harvested Area: Area in acre the household was able to harvest a large portion of harvests. This is the same as the area planted minus the area that was destroyed by floods/ pests /

Temporary/Annual Crops
Crops planted and harvested within 12 months after which time the plants die. Most annual crops are planted and harvested on a seasonal base.

Cash crop codes:

Code	Crop
50	Cotton
51	Tobacco
53	Payrethrum
62	Jute
19	Seaweed

Crop Codes (Cereal / Tubers/ Roots):

Code	Crop
11	Maize
12	Paddy
13	Sorghum
14	Buirush Millet
15	Finger Millet

47	Soya beans
48	Caster Seed

Instructions for calculating the area of mixed crops in a mixture

A. If the mixed crop is mixed annual by only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions

B. If the mixed crop is mixed permanent and annual try to work the percent age taken by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.

C: Number of trees method to calculate annual crop areas in a permanent-annual crop mix:

(i) List each of tyhe permanent crop in column b and enter the ground area per acre for each permanent crop (from instructions for page 8) in column d.

(ii) Enter the number of permanent trees in the mix in column e as will be provided to you by the respondent

(iii) Calculate the area occupied by each crop by multiplying column d and column e and sum up these to obtain the total area of permanent crops in the mix.

(iv) To obtain the area for temporary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.

(v) Proceed to step 1 to calculate the area under each temporary crop.

1. Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.

2. **Using the percentage for each crop, calculate the are for each crop from the remaining area under temporary crop.**

3. After completing the excrise for all the fields, sum the area of each crop in tyhe mix plus any monocrops and enter the totals in section 5.1.1 Column 3.

4. **Once the quantity harvested is obtained , calculate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box.** If there is significantly difference, check the area and the amount harvested..

5.3 PERMANENT/PERENNIAL CROPS AND FRUIT TREE PRODUCTION Identification

Does your household have any permanent/perennial crops or fruit trees Yes =1, No = 2, (If answer is NO proceed to Section 6.0)

5.3.1 Give details on permanent/perennial crops or fruit trees

Name of permanent/perennial crop	crop code of permanent / perennial crop/fruit trees	Production Section			Main crop owner: Enter the number of the hh member from page 2 on information for hh	Farm inputs									
		Monocrops Area for trees/seedling/branch/bushes	Mixed crops			Uses of seeds				Irrigation	Uses of Fertilisers (If 6 is the answer in col 13 proceed to col. 17)				
			Area for mixed crops (Acre)	Number of Tplants/ trees in the crop mix of permanent and perennial crop		Type of plant seeds	Cultivated area	Size			Cost (Ths)	Area used	The type of fertiliser used	Quantity of fertiliser (kg)	Cost (Ths)
		Quantity						Used

Storage (Col. 30, Q 5.2.1):
 - **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
 - **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

Marketing Challenges Q 5.2.1 Col. 33:
 - **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
 - **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
 - **Government Regulatory laws for crops marketing:** Government instituted laws for regulatind transportation and selling of crops.

Inputs (Q 5.2.1)
Farm Yard Manure: An organics fertliser made on farm from animal dung. .
Compost: An organic fertiliser made on farm from decomposed plant materials.
Insecticides: This is the chemical usde in protecting plants or killing pests.
Fungicides: Protects plants from fungi attack.
Herbicide: Chemicals used to control or kills weeds.
Improved seeds: Scientifically attested to be suitable for agricultural use.

Working area/calculation space

Questions specific definitions

Q 5.2.1. Instructions on crops storage:
 1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
 2. For the listed crops give explanations on storage.

Crops storage is keeping/reserving crops in a container or a special place for future use.

Q 5.2.1 Col 33
 1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

Definitions and working page for page 8

Permanent Crops:

These are crops once planted last longer in the farm and need not be replanted after each annual harvest. Most of the permanent plants include tress such as coconut tress, apple trees, grape trees, banana trees, pineapple trees etc.

Number of Trees:

These include manure trees and premature trees.

Number of mature plants:

A total of fruit bearing tress (e.g. mango trees, orange trees, avocado trees e.t.c).

Instructions for permanent monocrops and crop mix:

- A. For a field with permanent monocrop enter farm size in collumn. 3.
- B. For a field with a permanent crop mix or a temporary crop mix, enter the number of trees only in collumn 4.
- C. For a field with a permanent crop mix /temporary annual crops , either:
 - Enter the area in collumn 4, if the total arae for permanent crops was obtained through calcaultion of percentages of each crop
 - OR
 - Enter the number of tree in collumn 5, if the number of plants/ seedlings of permanent crops was avcluded

21 Cassava: Cassava is a temporary crop, in order to simplify data collection on areas of production, data on cassava will be collected from areas under permanent crops.

Permanent crops:(crop oils)

Definitions and working page for page 10

Investment in agriculture

Investment activities:

Investment activities refer to medium to long term farm development structures and projects. This can be irrigation structures, erosion control and water harvesting structures or other permanent or semi-permanent investment made on the land that the household owns.

Irrigated farming: Section 6.5:

Source of irrigation water (Col 1): The main source of the water used for irrigation.

Method of obtaining water (Col 2): The mechanism by which the water is extracted from the source

Irrigatable area (Col 3): The area the irrigation system is designed to cover in acreage

Area of irrigated land during the 2007/08 (Col 5): Area of land under irrigation during the 2007/08 agricultural year. This is the actual area and NOT the cumulative areas recultivated in 2 or more cropping seasons.

Farm Implements (Col. 1):

Machette : Include all implements use in tree cutting namely cicle, etc.

Sprinkler: The pump carried on the back or a hand used water pump

Hand used small tractor: A small tractor used in cultivation while the user walks on foot (see photo).

Section 6.2 Use of draft animals

Animals used in agricultural activities by the household during 2007/08 agricultural season.

Castrated Bulls: Castrated oxen meant for use in agricultural production.

Uncastrated Bulls: mature bulls used for garicultural activities but are not castrated.

Cow: Farmers also use mature female cattle in agricultural activities due to shortage of bulls

Donkey: Mature Male or female donekys are also used for agricultural production.

Q 6.5 Irrigation.

1. If a household uses irrigated farming give explanations aon source and method of obatining water. .

2. See Col 10, Q. 5.1.1 and 5.2.1 and Col 12, Q 5.3.1 to see if irrigation was applied to any crop.

Farm implements, Q 6.1:

1. Collumn 2 Indicate whether or not inputs were used

2. Complete collumn 3 by entering the number of inputs used.

Farm inputs: Sections 6.3 and 6.4

1. Collumn 2 Indicate whether or not inputs were used.

2. Compelte collumn 3 by indicating where the inouts were obatined and collumn 4 by indicating the distance from where the inputs were obatined

Compost: An organic fertiliser made on farm from decomposed plant materials.

Insecticides: This is the chemical usde in protecting plants or killing pests.

Fungicides: Protects plants from fungi attack.

Herbicide: Chemicals used to control or kills weeds.

Improved seeds: Scientifically attested to be suitable for agricultural use.

Definitions and working page for page 11
Q 6.6
The type of erosion control/Water harvesting (Col 1)

Terraces: Structures constructed on mountain slopes to provide flat terrain for crop planting.

Erosion control bunds: these are bunks of earth/stones built perpendicular to the slope to slow down the speed of water and thus preventing soil erosion. Its differs from terraces in that the soils on these banks are not at ground level .

Gabions: A box like structure made of wire and filled with large stones to prevent gully erosion.

Sand bags: Are used in controlling and preventing gully erosion

Tree belt/wind breaks: Trees planted against the wind direction for breaking wind speed..

Section 7.0 Acces to credit for crop or livestock production

Credit refers to something provided in cash or in kind (such as farm inputs, machines, livestock and other things) for crop or livestock production. The value of the credit must be repaid back to the lender. An Interest may or may not be attached to the value of the credit

The credit may be repaid either in cash or through farm produce to be harvested .

In this question the enumerator is at liberty to inquire up to three sources of credit where the farmer accessed credit from more than one source.

Section 8.0 Agricultural Extension Services

Agricultural Extension Services: Refers to educational services provided to farmers by extension officers for the purposes of increasing crop and livestock production.

Share-cropping: Refers to farming where smallholder / Smallscale farmer enters into an agreement with large scale farmer where the former sells produce to the latter in exchange of provisions of farm inputs and the like. .

Contract farming Farming: Farming agreement entered between smallscale and large scale farmers with regards to markets of farm produce and provision of farm inputs

Q 6.6 Number of water harvesting structures and year of construction

1. The number water harvesting structures refers to the number of working / maintained structures and does not include derelict or irreparable structures.

2. Year of construction refers to the year in which the structures were built, and not the year the structures were last repaired. The year should be written in figures e.g. 1998, 2006.

Section 7.0 Source of agriculture credit

If the farmer obtained credit from more than one source the use the code from the list provided. Start with the main source of credit in Section "7.1.1".a

Section 8.0 Agricultural extension services

1. Ask if the household did receive agricultural extension services during 2007/08 agricultural season from the respondents listed in column 1, then enter column 2.

2. Complete all columns for every extension officer.

6.6 SOIL EROSION							Identification <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
6.6.1 Did the household experience soil erosion during 2007/08 agriculture year? (Yes=1, No=2)							<input type="checkbox"/>			
6.6.2 Did the household applied any methods for erosion contro/water harvesting during 2007/08 agricultural year? (Yes=1, No =2) (If the answer is No, Proceed to Section 7.0)							<input type="checkbox"/>

Q 9.1 and 9.3 : What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

Keeping or raising livestock is to to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

Sections 9.1.1 to 9.1.7 Cattle

Note:

Q 9.1 is for the actual number of cattle owned or kept by the household (as of 1st October 2008). This number does not include herds of cattle kept on behalf by relatives or neighbours; that is, the cattle outside the residential area of the household under survey.

1. If the the household keep mature fecund female cattle, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

Type of cattle (section 9.1.1 to 9.1.7)

Bull: Mature uncastrated male cattle used for breeding

Cow: Mature female cattle that has given birth at least once

Ox: Castrated male cattle used for farm work

Steer: Castrated male cattle used for meat

Heifer: Female cattle of 1 year up to the first calving

Section 9.3 Goat

Note:

Question 9.3 is for the actual number of owned or raised by the household (as of 1st October 2008) This number does not include goats kept on behalf by relatives or neighbours, that is the goat outside the residential area of the household under survey.

1. If the household has she goats, you would normally expect them to have kids

Type of Goat (Qs 9.3.1 to 9.3.5)

Billy Goat (he-goat): Mature Uncastrated male goat used for breeding

Castrated goat: Male goat that has been castrated

She Goat: Mature female goat over 9 months of age

Definitions and working page for page 15

General definitions

Fish farming: Refers to the rearing/production of fish. It is different from fishing in that in fish farming the fish have to be reared. While in fishing, fishing nets or traps are used to catch fish from rivers, lakes and the sea; thus fishing should not be included in this section

I

Question Specific Definitions (Q 9.9)

Production unit number (Col 1): A production unit is a pond river/lake which is treated as a separate entity for the production of fish eg it may be by virtue of manageable size, maturity of fish, type of fish etc. eg. a farmer may have 3 fish ponds (each one is a separate production unit).

Frequency of stocking (Col . 5): What is the number of time the farmer puts new fingerlings into the pond each year.

Fingerlings: These are young immature fish used for stocking ponds.

Sols: (Col 10 & 11)

If no fish were sold enter "0" in column 10 and 11`

Fish sold (Col.12)

Kama hakuna samaki waliouzwa jaza "0" katika safuwima 12

Definitions and working page for page 3

Question Specific Definitions:

Obtain answers to the following questions from the meeting between the enumerator and influential farmers in the village. Influential people can be Village Chairman, Village Government Executive Officer, Councillor, Ward Chairman, Extension Officer in the village or any other person in the village and who is well informed about village matters. It is important to not that these questions must be asked in groups (of more than one people) to obtain answers discussed and approved by many people.

Definitions of some specific terms

Access to community resources. Section 1.0

Community Resources: Resources in which the hh members have no individual claim to and which are shared together by all the village

Community Land: The area official demarcated by the village as shared/public land.

Squatting farmers Land: Communal land where individual hhs make sole claim to (for crop farming or fenced livestock) without official rights to ownership.

Available remaining Land: Official area of communal land minus areas of squatting farmers.

Government Land Reserve: Area set aside by the government as national reserve

Community tree planting scheme(Section 14.3)

Community Forest: A forest planted on the communal land which is planted, replanted or spt planted by the members of the village.

Plant Planting: An area designated by the village for planting a block of trees.

Spot Planted: Replanting an area where selective logging has been carried out. A tree is planted to replace the one that has been cut.

Indigeous Trees: Trees that are native to Tanzania

Exotic Trees: Trees that are not native to Tanzania

Non Government Organisation: Is managed by people from outside the village and it normally covers more than one village/District/R region. Its function is to provide deveoopment assistance to the farmer and is free from direct government links.

Village level organization: is managed by members of the village. Its purpose is normally to access/provide development assistance to the village

ACCESS TO COMMUNAL RESOURCES

1. ACCESS TO COMMUNITY RESOURCES								
1.1 Does the village set aside an area for communal resources e.g. forest, grazing, etc. (Yes=1 No =2)							<input type="checkbox"/>	
<i>(If the answer is no proceed to 1.2)</i>								
Are of Community, Village, Ward resources				Area in acre				
1.1.1	Total area of communal land	<input type="text"/>			Official figures from the leader			
1.1.2	Area of squatting famers in communal land	<input type="text"/>			Key informant (Leader/Extension officer etc.)			
1.1.3	Remaining available communal land	<input type="text"/>			Key informant (Leader/Extension officer etc.)			
1.1.4	Government reserve land	<input type="text"/>			Key informant (Leader/Extension officer etc.)			
1.2 UPATIKANAJI NA MATUMIZI YA MALIASILI ZA JUMUIYA/KIJIJI/SHEHIA								
	Community Resources	Distance from the resource in Km -season		Main Use		<p>Instructions on distance from the resource (Cols 2 and 3): Distance is estimated from the centre of the village.</p> <p>If under 1 km 1, enter 0 If above 1 km 1 enter whole number , eg. 1.5km= 2km, 1.25km= 1km</p> <p>Main uses (Col. 4) Home or farm /livestock consumption...1 Sold to traders in the village.....2 Sold to the village market.....3 Sold to local wholesalers.....4 Sold to Big wholesalers5 Not available.....6</p>		
	(1)	Dry (2)	Rainy (3)	(4)				
1.2.1	Water for human consumption	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.2	Water for livestock	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.3	Communal grazing land	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.4	Communal firewood	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.5	Wood for charcoal burning	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.6	Wood for building poles	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.7	Forest for bee keeping (honey)	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.8	Hunting	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.9	Fishing	<input type="text"/>	<input type="text"/>	<input type="text"/>				
2.0 COMMUNITY PLANTED TREES								
2.1 Did your village have community planted trees during 2007/08 agriculture year? (Yes=1, No=2)							<input type="checkbox"/>	
<i>If the answer is no proceed to Section 3.0</i>								
Details of the community tree planting scheme								
No.	Distance from the community forest	Forest Area (acre)	Type of Planting	Type of Trees	Source of seeds / Seedlings	Number of Years since the start of planting	Main uses 2007/08 agriculture year	Main uses of communal forest products
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
2.2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
<p>Type of planting (Col. 3) Plantation planting.....1 Spot planting.....2</p> <p>Type of trees (Col. 4) Indigenous trees.....1 Exotic tree.....2 Both types.....3</p>		<p>Source of seedlings (Col. 5) Seeds collection and planting.....1 Village Nursery.....2 Department of Forestry.....3 Private Individuals.....4</p>			<p>Main Uses (Col. 7) Poles.....1 Wood.....2 Charcoal.....3 Firewood.....4 Other /Specific.....8</p>		<p>Main use of revenue (Col.8) Village development fund 1 Household use.....2 Household income.....3</p>	
3.0 Non governmental Organisation (NGOs) Contact				4.0 Community Based Organisation				
3.1 Did any NGO visit the village during 2007/08 agriculture year? (Yes=1, No=2) (If no proceed to Section 4)				4.1 Did the village have any CBO during the 2007/08 agriculture year?(Yes=1, No=2)				
<input type="checkbox"/>				<input type="checkbox"/>				
Na.	Type of NGO	Visited Y=1,N=2	Number of visits	Distance to the Office (km)	Na.	Type of CBO	Nd=1,Hap=2	
3.2	Extension/ Research	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	4.2	Extension/ Research	<input type="checkbox"/>	
3.3	Service /Input provision	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	4.3	Service /Input provision	<input type="checkbox"/>	
3.4	Community Development	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	4.4	Community Development	<input type="checkbox"/>	
3.5	Other	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	4.5	Other	<input type="checkbox"/>	
5.1 Did the village have Field farm schools during 2007/08 agriculture year? (Yes=1, No=2)				5.2 Did the village participate in any research on crops/ improved livestock during in the village during 2007/08 agriculture year? (Yes=1, No=2)				
<input type="checkbox"/>				<input type="checkbox"/>				
5.3 Did the village have local ironsmiths during 2007/08 agriculture year? (Yes=1, No=2) (If the answer is 2 proceed to q. 5.5)				5.5 Did the village have any training centres on draft animals during 2007/08 agriculture year? (Yes=1, No=2) If number 2 is the answer conclude the enumeration.				
<input type="checkbox"/>				<input type="checkbox"/>				
5.4 Number of local ironsmiths				5.6 Number of training centres for draft animals				
<input type="text"/>				<input type="text"/>				

Obtain answers to the following questions from the meeting of enumerator and key informants in the village. Key informants can be a village chairman, Village Local Government Executive Officer, Councillor, Ward Chairman, Village extension officer, or any knowledgeable member in the community. Where possible ask these questions to a group in order to reach a consensus. **The number should be below five people.**

Procedure: Administer this form after completing all smallholder questionnaires for the village.
 1. Copy the name of all crops from Sections 5.1, 5.2 and 5.3 grown in the village from smallholder questionnaires. This should also include livestock raised by the household from questions 9.1, 9.3, 9.4 and 9.5 and enter them in column 1 of this form. Also see codes for livestock below.
 2. Enter price estimates per kg in column 5 and 6.

Name of crop/livestock (1)	Code of crop/livestock (2)	Name of main crop (3)	Code of Main crop (4)	Type of measure (5)	Price of measure	
					Minimum Per year (6)	Maximum Per year (7)

Type of livestock (Col. 2)
 Cattle01 Ducks.....07
 Goat.....02 Turkey.....08
 Sheep.....03 Rabbit.....09
 Pigs.....04 Kanga.....10
 Poultry.....05 Simbinsi.....11
 Donkeys.....06

Main product- CROPS (Col.4)
 Cereals.....01 Flowers eg. Pyrethrum.....07
 Green maize.....02 Vegetables.....08
 Green leaves and stem.....03 Fruit.....09
 Straw, dry stems etc.....04 Other.....10
 Roots and tubers, etc.....05
 Leaves (Tobacco etc).....06

Main product- LIVESTOCK (Col. 4)
 Live animals.....01
 Meat.....02
 Milk.....03
 Eggs.....04

Quantity (Col.5)
 Kg.....1
 Number.....2
 Litre.....3
 A portion/piece 1.4
